IGT STAFF APPOINTMENTS

CHICAGO, ILL. -- Three scientists have joined the staff of the Institute of Gas Technology, 3325 South Dearborn street, it has been announced by John I. Yellott, director.

Russell T. Griffith, instructor in chemical engineering at Illinois Institute of Technology since 1941, had previously been employed for eight years at the City Service Oil company in East Chicago. A graduate of Purdue university in 1933, Mr. Griffith received the master of science degree from Illinois Tech in 1941.

Miss Eleanor Landon, who is a graduate of Mundelein college and holds a master's degree from the University of Illinois, was formerly a research assistant for the American Meat institute.

Mr. Masanobu Miyaji has worked as a chemist for the Marblehead Lime company and as a laboratory assistant for the Chicago Biological Research laboratory. He is a graduate of Illinois Tech.

MIDWEST POWER CONFERENCE

CHICAGO, ILL. -- A session on the gas turbine, a new type of prime mover expected to play an increasingly important role after the war, will be included for the first time on the 1945 program of the Midwest Power conference, Staton E. Winston, conference director, has announced.

Sponsored by Illinois Institute of Technology, where Mr. Winston is associate director of the mechanical engineering department, the conference will be held April 9 and 10 at the Palmer house. An attendance of 2,000 to 2,500 is anticipated.

Mr. Winston said that the gas turbine has been rapidly coming to the foreground in recent years, due partially to wartime developments. It uses gas as a working medium in the production of power, in contrast to older types of the turbine, which use steam.

Various designs of the gas turbine, many of which are now in service, will be discussed at the conference. Problems involved in their utilization will also be taken up.

"It is anticipated that this most recent type of prime mover will gain great headway in the postwar era," Winston said.

ANNUAL MPC MEETING

CHICAGO, ILL. -- The eighth annual meeting of the Midwest Power conference will be held April 9 and 10, 1945, at the Palmer house in Chicago, it has been announced by Stanton E. Winston, conference director.

"To victory and post-war prosperity with power" is the theme of the meeting.

The conference is sponsored by Illinois Institute of Technology, where Mr. Winston is associate director of the mechanical engineering department. Nine colleges and universities and several engineering societies are cooperating agencies.

A session on the gas turbine will be included in the program for the first time, Mr. Winston said. Other sessions being planned will deal with industrial power plants, feedwater treatment, recent developments in heating, recent developments in air conditioning, fuels and combustion, central station practice, post-war load planning, Diesel power, and hydro power.

Three electrical sessions, the all engineers' dinner, and the joint luncheons with the American Society of Mechanical Engineers and the American Institute of Electrical Engineers complete the preliminary program.

FIRST ADD ANNUAL MPC MEETING #155

"Every one interested in the field of power and in the nation's power problems is cordially invited to the conference," Mr. Winston said. He emphasized that hotel reservations should be obtained early.

Assisting Mr. Winston in formulating the preliminary program are Dr. Jesse E. Hobson, new director of Illinois Tech's Armour Research Foundation, and Dr. William A. Lewis, research professor of electrical engineering at the institute.

The following agencies are cooperating with Illinois Tech in sponsoring the conference: Iowa State college, Michigan State college, Northwestern university, Purdue university, State University of Iowa, the Universities of Illinois, Michigan, Minnesota, and Wisconsin, the local sections of the Founder and other engineering societies, and the Engineers' society of Milwaukee.

Further information with respect to the conference may be obtained from the secretary, Charles A. Nash, Illinois Institute of Technology, 3300 Federal Street, Chicago 16, Illinois. The preliminary program will be ready for distribution early in February.

PUBLIC RELATIONS OFFICE

Kansas City, Missouri

WARD

For Release: Sunday, December 10, 1944

KANSAS CITY, MO., Dec. 10 -- Harold A. Vagtborg, president of the Midwest Research Institute, today announced the appointment of Dr. George W. Ward as a member of the staff.

Dr. Ward, trained in geology and mineralogy, was associated with the National Bureau of Standards, Washington, D. C. from 1937 until 1944. For the past ten months he has been on the staff of the Armour Research Foundation in Chicago as the supervisor of ceramic industrial materials research.

In commenting on Dr. Ward's appointment, Vagtborg said, "It is obvious to all of us that in the great geographical area in which the Midwest Research Institute will operate one of the opportunities offering the greatest potentiality is new and expanded industry for the upgrading of natural resources.

"I feel we are particularly fortunate in being able to bring to the staff of the new institute a man having Dr. Ward's technical background. His association with the staff will bring to us also the internationally famous techniques and procedures of the National Bureau of Standards."

Dr. Ward has served as a chemist and assayer for a Canadian research laboratory and was an assistant on the Canadian Geological Survey. As

-m o r e-

a research chemist in geology, he was in charge of the chemical laboratory of the Portland Cement Association in Chicago and was a consultant in microscopy for both the American Medical Association and American Dental Association. At the University of Chicago he inaugurated and taught the first course in chemical microscopy.

"I am looking forward with a great deal of enthusiasm toward my new duties," Dr. Ward said. "The geology of the Midwest area and its mineralogical industrial possibilities have always been of great interest to me. I feel further there will be unlimited opportunities for excellent collaboration with the many fine institutions in this area that have a similarity of purpose, or that are interested in this great field."

Member of Sigma Xi, honorary research fraternity, Dr. Ward also holds membership in the American Chemical Society and the American Ceramic Society. He is on the Joint Committee on durability of concrete of the Highway Research Board.

Dr. Ward took his bachelor and master degrees at the University of Manitoba and received the doctorate at the University of Minnesota in 1928.

MILITARY TRAINING

CHICAGO, ILL. -- Officers and directors of the American Alumni council, an organization representing 300 colleges and universities in the United States and Canada, went on record here today as urging close cooperation between the war department and higher education before any definite plan is adopted for compulsory military training.

In a letter to the Association of American Colleges, which will meet in Atlantic City, December 18, 19, and 20, the alumni officers said: "It is our belief that any program which so modifies our whole educational philosophy should represent the wisdom of our leaders in higher education as well as that of our military leaders."

The directors adjourned today after their annual three-day meeting, held at the Edgewater Beach hotel. J. Maryon Saunders, alumni secretary at the University of North Carolina, Chapel Hill, is president of the group.

BLANKE ART

Miss Marie Blanke, 1718 North La Salle, whose oil and water-color paintings are now being displayed at the west side campus of Illinois Institute of Technology, 1951 West Madison street, was on the staff of Lewis Institute, one of the predecessors of Illinois Tech, when it was founded in 1896. She retired only a year ago as art instructor and since that time has continued her career as a painter.

The sixteen pictures on exhibit are largely in oils. The two water colors displayed are floral scenes showing delphiniums and cannas.

Miss Blanke's "Victorian Parlor," an oil which won a Municipal Arts League prize, shows the interior of an old home at Madison, Ind. Its sedate atmosphere and subdued coloring is in contrast with another painting "Rocks and Hill."

Several of the paintings are of outdoor scenes. There are "Pigeon Cove," a Massachusetts scene; several fishing scenes, and "Michigan Shore Line," outlining trees along a winding lake front.

The artist took most of her training at the Art Institute here but has also studied in Europe.

The exhibit, which will extend through December 29, is open to the public.

WINDOWS

Glancing up at the colorful Christmas scenes in the windows at 1951 West Madison street, the observer might have the fleeting impression that he was passing a cathedral.

He would be seeing, however, not a panel of costly stained glass windows but a simulation made of colored poster paper.

The windows were designed and prepared by art students at the west campus of Illinois Institute of Technology under the direction of Miss Ruth Severud. The panel effectively imitates stained glass, yet the entire project was carried out simply with colored paper, razor blades, scotch tape, linseed oil, and turpentine, and was put together like a jig-saw puzzle.

Six windows, each 8 feet high and 3½ feet wide, have been thus decorated. They are divided into two units of three.

A madonna and child form the central motif of one unit, which bears the simple message, "Peace." This is surrounded by angelic figures, wise men on camels, and scenes of Jerusalem.

The other unit, inscribed "Joy to All," centers around the infant Christ, with joyful children admiring him and playing happy tunes on pipes.

-m o r e-

FIRST ADD WINDOWS #160

Twenty girls combined their efforts in producing the windows. The design was worked out from their suggestions, and the layout of the pieces planned together. Each girl was responsible for making a certain number of the smaller sections, using a stencil method and cutting the colored paper with razor blades to fit into the larger design. The parts were later fastened together with scotch tape in their proper places against the windows.

The transparent effect and the deep and rich coloring which make the windows luminous even in cloudy weather are due to the use of linseed oil and turpentine, a technique worked out by Miss Severud. Rubbing this mixture over the surface softens the paper to give the desired effect so that the windows have a similar appearance on both sides.

In carrying out the project the students have not only produced an unusual Christmas decoration for the school but they have learned much about the process of making real stained glass. They studied each procedure in the construction of the authentic glass and used processes corresponding as nearly as possible to these.

Miss Severud has been greatly interested in stained glass since she went abroad several years ago and saw some of the most famous cathedrals of Europe. Since that time she has made a special study of this field and has experimented extensively with the most effective methods for making the simulated windows.

CHRISTMAS CONCERT

CHICAGO, ILL. -- "Ballad for Americans," an epic cantata by John Latouche and Earl Robinson, will be featured at a Christmas concert to be given by musical groups at Illinois Institute of Technology in the school's auditorium at 10 a.m. Wednesday.

Trent Knepper, apprentice seaman in the Navy V-12 unit, a baritone, will take the solo part expressing the spirit of democracy, portrayed in the cantata as the hope of America from the revolution until the present era. The cantata will be given jointly by the glee club and orchestra.

The glee club will also sing Stoughton's "Dawn of World Peace," and the orchestra will present a Christmas number, "Beneath the Holly," by Tobani.

The finale from Tschaikovsky's Fourth Symphony and a special arrangement of "Deep Purple" will be performed by the school's navy band.

A medley of Christmas carols in which the audience will join completes the program, which is open to the public. O. Gordon Erickson, musical director, is in charge.

Special to the Tribune North Side Met Section

Lt. Jerome Adelson received recognition in "Yank" magazine redently for skill in laying a pontoon bridge which aided in U.S. victory over a German occupied Belgium town. A civil engineer before entering the service, the north sider was graduated from Illinois Institute of Technology in 1938.

He spent 18 months in the Aleutians and was with the American forces in the battle of Attu. Then he returned to the Unites States for five months, training troops at Camp Ellis. Last Spring he took his Negro troop to England and on D-Day led them in the invasion of France. He is with the 9th Army.

The Lieutenant is the son of Mr. and Mrs. S.L. Adelson of 6830 Lakewood.

HEALD AT BRADLEY GRADUATION

also to Journal-Transcript

Special to the Star

CHICAGO, ILL. - Dr. Henry T. Heald, president of Illinois Institute of Technology, Chicago, will speak at the graduation exercises of those completing the war training program at Bradley Polytechnic Insttitute, Thursday evening.

In his talk he will explain the achievements of the Engineering, science, and management war training program being operated through the nited States Office of Education at schools and colleges throughout the country.

Since the beginning of ESMWT, Dr. Heald has served as regional adviser to all schools that have the program in Illinois, Wisconsin, and parts of Indiana.

He has been closely associated with training men for the war effort. In addition to ESMWT he is special adviser on training with the Bureau of Navy Personnel, a member of the American Council on Education's Committee for Co-operation of Higher Education with the Federal Government in the war, and technical consultant for the War Manpower Commission n Washington.

ART EXHIBIT

Special to the Tribune North Side Met Section

Miss Marie Blanke, 1718 N. La Salle, is the creator of 16 oil and water-color paintings which are on exhibit at the West side campus of Illinois Institute of Technology, 1951 W. Madison st. An art instructor at Lewis Institute, one of the predecessors of Illinois Tech, when it was founded in 1896, the North side artist retired from her teaching career a year ago, but has continued her painting.

All but two of the pictures are in oil. One of these, is "Victorian Parlor", which won a Municipal Art League prize, shows the interior of an old home in Madison, Indiana. Most of the other oils are outdoor scenes like"Michigan Shoe Line" and "Pigeon Cove", a Massachusetts scene.

The exhibit, which is open to the public, will extend through December 29.

For many years Miss Blanke has exhibited her work annually. She studied in Munich and London, as wellaas, the Chicago Art Institute.

PUBLIC RELATIONS OFFICE

Kansas City, Missouri

ZIEGLER

For Release: Sunday, December 17, 1944

KANSAS CITY, MO., Dec. 17 -- The man directly responsible for the supervision of the technological aspects of the development of the magnetic wire recorder at the Armour Research Foundation, Dr. George E. Ziegler, has accepted a position with the Midwest Research Institute, Harold Vagtborg, president, announced today.

Dr. Ziegler will report for his new assignment on February 1. He will be primarily responsible here in representing the Midwest Research Institute in its extensive relationships with educational institutions of the Mid-west.

Marvin Camras, inventor of the magnetic wire recorder at Armour Research Foundation, worked directly under Dr. Ziegler, and it was under him that many hundreds of the devices were manufactured for army and navy use. A pilot plant operation was set up until licensed manufacturers could get under way with production.

Mr. Vagtborg says that he is exceedingly pleased that Dr. Ziegler has accepted this appointment as he is so eminently qualified to represent the institute in scientific and professional circles.

-m o r e -

"His record in handling cooperative matters is unique," Vagtborg said. "And at the same time he is so well qualified as a scientist in the field of physics that this work will be given considerable impetus in the service of the Mid-west area."

Dr. Ziegler said that he was looking forward with great enthusiasm to the opportunity for broadening the usefulness of Mid-west industries in the field of applied physics. He was particularly attracted, he said, by the "opportunity to work with universities and colleges and hoped that in a small way I can bring about a mutual interchange of ideas."

Dr. Ziegler, age 37, has bachelor's, master's, and doctor's degrees in physics from the University of Chicago. He has also done considerable work in mathematics, geology, and chemistry. His major professionsl interests are in the application of the fundamental principles of physics and to the solution of industrial problems.

He has published in scientific journals many papers on the experimental determination of the size and arrangements of the atoms in various substances, and is the inventor of the ink-feeding mechanism of one of the most popular fountain pens on the current market.

He has been a member of the staff of Armour Research Foundation of Illinois Institute of Technology since 1936, having been originally appointed as an x-ray physicist. He had been chairman of physics research until February of 1944 when he received the appointment of scientific adviser to the foundation.

SIGNAL CORPS

CHICAGO, ILL. --Graduation exercises for fifty-four women, the second class to complete the Signal Corps Inspection Agency's training program at Illinois Institute of Technology, were held Thursday morning at the school's west side campus, 1951 West Madison street.

Col. Lester J. Harris, director of the agency, gave the commencement address. Other speakers were Lt. Col. Eldon A. Koerner, commanding officer of the Signal Corps zone; John I. Yellott, director of Illinois Tech's war training program; E. H. Schulz, instructor in electrical engineering who taught the training course, and Miss Dorcia Gosthea, one of the graduates.

Vocal numbers were presented by the Misses Lillian Buchthal, June Ann Fischer, Marjorie McLellan, and Virginia Shepherd, all members of the graduating class.

Formerly employed in war industry inspection work, the women were chosen by the Signal Corps to take additional training in order to qualify for more technical inspection positions. The Signal Corps places them in suitable work on completion of the course.

HOUSING

CHICAGO, ILL. - Healthful housing is possible even at densities as great as those found in the congested slum areas of many United States cities, Ludwig Hilberseimer, professor of city planning at Illinois Institute of Technology, asserts in his recently published book, "The New City."

Density itself, unless extreme, is not responsible for unhygienic housing conditions, he says. If proper planning is done when new homes are built, health needs can be safeguarded in areas with as many as 75,000 persons per square mile.

"It is by no means implied that such density is necessary or desirable, "Mr. Hilberseimer declares.

Nor does he imply that housing units planned for single families might safely hold larger numbers. His concern is with the proper planning and location of housing at the time it is built to insure adequate sunlight and space between buildings.

To meet these minimum health needs even at high densities, Mr. Hilberseimer recommends the use of L-shaped houses and the alternation of apartment buildings with one-family, one-story houses.

-m o r e-

Date: December 27, 1964

For Release: at will

Contact:

#164

FIRST ADD HOUSING

The buildings must be properly oriented to receive the greatest benefits from sunlight, the author points out. He suggests further that the long, deep lots found in most cities should be replaced with square or nearly square lots. By utilizing space that is now wasted at the back of the lot, this would allow more space between buildings and consequently more sunlight.

Unsuitable division of land into deep lots has a bad effect on the health of the residents even in areas of low population density, Mr. Hilberseimer observes.

The apartment house is in disfavor today, for most such houses represent only the negative aspects of this type of dwelling, he says. "The apartment house could, however, be the ideal home for single persons and childless couples because it offers certain communal facilities impossible in other kinds of dwelling," the author contends.

"It can be free-standing so that those who live in it may enjoy the benefits of sunlight and fresh air. Though the apartment dweller has no garden, he can have a view over gardens."

Discussing the proper location of houses in relation to sunlight, Mr. Hilberseimer says that a south orientation offers a room the most advantages, for the sunlight penetrates here most deeply in winter, when it is needed most. He notes, however, that "southwest and southeast orientations are to be preferred to due south orientation when they are combined in a single dwelling unit, so that the bedroom receives sunshine from the southeast and the living room faces southwest."

BEVERAGE PRODUCTION

Chicago, Ill. - Eight members of Illinois Institute of Technology and five men from the soft drink industry have been named as instructors for the three-weeks' training course in beverage production and plant operation, to be given at Illinois Tech under the sponsorship of the American Bottlers of Carbonated Beverages.

The course, which will be held January 29 to February 17, is open to selected emplouees in the carbonated beverages industry, with a maximum enrollment of 100. It is one of three such courses sponsored by the bottlers' aswociation, the others being held at Drexel Institute of Technology, Philadelphia, and Texas A. and M. College, College Station, Texas.

Paul G. Andres of the electrical engineering department is director of the Illinois Tech course, with Dr. L. R. Hedrick, head of the biology department, serving as educational supervisor. Dr. Hedrick will also lecture on sanitation, germicides, and bacteriological problems of the industry.

Other Illinois Tech faculty members who will participate and the subjects of their lectures are:

Henry P. Dutton, chairman of business and economics, Economic Aspects of Industry.

L. F. Fupple, professor of organic chemistry, Chemical Constituents of water.

-m o r e-

FIRST ADD BEVERAGE PRODUCTION

H. J. McDonald, associate professor of chemistry, Properties of Carbon Dioxide.

Dr. R. C. Kintner, professor of chemical engineering, Refrigeration.

A. L. Mell, assistant professor of architectural design, Architectural Aspects of Bottling Plants.

Dr. F. W. Mohlman, professor of sanitary chemistry, Sanitary and Protective Features of Bottling Plants.

E. Clark Woodward, director of war safety training, Plant Operation.

In addition to the Illinois Tech personnel, five men from the carbonated beverage industry and one from the State Department of Public Health have been scheduled to lecture:

H. B. Gustafson, Insilco Company, Chicago, Water Impurities and Purification.

James Kantor, Liquid Carbonic Corporation, Chicago, Carbonation Principles, Bottling Principles, and Mechanical Maintenance.

K. H. Buchanan, United Flavors, Inc., New York City, Syrup making.

C. M. Moore, Diversey Corporation, Chicago, Bottle Washing and the Practical Use of Germicides and Detergents.

Dr. W. C. Cooper, Meyer Manufacturing Corporation, Cudahy, Wis., Bottle Washing.

E. G. Huffer, milk sanitarian, State Department of Public Health, Springfield, Sanitary Factors in Plant Operation.

Morning and afternoon sessions will be held Monday through Friday, with visits to plants in the Chicago area each Saturday.

HOBSON

Milwaukee, Wis. - January 12 - The importance of cooperation between industry and engineering colleges in post-graduate education was stressed by Dr. Jesse E. Hobson, director of the Armour Research Foundation of Illinois Institute of Technology, in a talk before the Wisconsin Society of Professional Engineers this afternoon.

Speaking at the second annual conference of the society at the Hotel Pfister, Dr. Hobson said such cooperation would stimulate research in the colleges and would also benefit industry by providing better trained engineers. He predicted more widespread interchange of staff personnel between colleges and industrial plants in the post-war period.

Engineers who are to be thoroughly abreast of modern developments must continue their training after graduation, the speaker pointed out.

Dr. H. A. Leedy, co-chairman of physics research at Armour Research, gave a demonstration of the wire sound recorder developed at the foundation several years ago.

CITIZENSHIP FUND

Chicago, Ill. - Dr. John D. Larkin, chairman of the political and social science department at Illinois Institute of Technology, has announced the establishment of a Citizenship Fund to be used for the promotion of greater interest in citizenship at Illinois Tech.

An alumnus, John R. LeVally has donated the first gift toward the founding of the fund.

The citizenship fund, which Larkin heads, is part of a movement originated by the National Foundation for Education. Its major objectives is to encourage college men and women to participate actively in public affairs in order to insure good democratic government in the postwar world.

BODER

Dr. David P. Boder will speak on "Psychology in War Time and in the Post War Transition" Tuesday, January 16 at 8 p.m. in the auditorium of the St. Francis Episcopal Church, 2514 W. Thorndale.

Professor of psychology at Illinois Institute of Technology, Dr. Boder is also executive director of the Psychological Museum. He previously taught at the University of Mexico and for the past six years has been psychological consultant at Michael Reese hospital.

The Women's Auxiliary of St. Francis Episcopal church will sponsor the lecture with Mrs. P. J. Arne, 5915 N. Campbell, as chairman.

MPC SPEAKERS

Chicago, Ill. - Thirty men have been named by Stanton E. Winston, director of the Midwest Power conference, as participants at its eighth annual meeting April 9 and 10 at the Palmer House.

An address of welcome by James D. Cunningham, president of the Republic Flow Meters company, will open the conference. F. Ellis Johnson, dean of the college of engineering at the University of Wisconsin, will give a response for the cooperating institutions.

Alexander D. Bailey, vice-president of the Commonwealth Edison company, will be the speaker at the joint luncheon with the American Society of Mechanical Engineers, of which he is president.

"Promotional Engineering" will be the subject of D. C. Prince's talk before the joint luncheon with the American Institute of Electrical Engineers. Mr. Prince is vice-president of the General Electric company, Schenectady, New York.

An all-engineers dinner April 9 is another special event scheduled.

The conference is buildt around the theme, "To victory and post-war prosperity with power", and is sponsored by Illinois Institute of Technology with the cooperation of several colleges, universities, and engineering societies. Director Winston is also associate director of the mechanical engineering department at Illinois Tech.

m o r e

FIRST ADD MPC SPEAKERS 4513-6

Five men will participate on a symposium on the gas turbine, a new session at the conference. They are John R. Carlson, central station steam engineer of the Westinghouse Electric & Manufacturing company, Philadelphia; John T. Rettaliata, manager of the research and gas turbine development division of the Allis-Chalmers Manufacturing company, Milwaukee; Paul R. Sidler, resident engineer at Brown, Boveri and company, New York City; Ronald B. Smith, director of research and development at the Elliott company, Jeannette, Pa.; and Stanley A. Tucker, associate editor of Power, McGraw-Hill Publishing company, New York City.

Appearing on the session on central station practice will be P. S. Dickey, chief engineer of the Bailey Meter company, Cleveland, who will discuss "Automatic Control of Steam Generators and Auxiliaries, and Charles J. Clark, manager of the pump and dondenser department of the Ingersoll-Rand company, Chicago, whose topic will be "Modern Condenser Practice." This session is sponsored and arranged by the power and fuels division of the American Society of Mechanical Engineers' Chicago section.

"Future Requirements and Trends in the Use of Electric Power" will be the subject of a lecture by Howard P. Seelye, senior engineer at the Detroit Edison company. In addition, three entire sessions will be devoted to electrical problems: recent electrical developments, industrial load supply, and insulation problems on power systems.

Two men from the General Electric company, Schenectady, will take part in the session on recent electrical developments. They are L. T. Rader of the industrial control engineering division and S. Martin, Jr., of the industrial engineering division, whose respective topics will be "The Application of Rotating Regulators" and "Post-war Load Building." Also appearing in the session will be Irvin S. Illing of the Wisconsin Electric Power company, Milwaukee, whose talk will deal with "Recent Developments in Illumination."

On the industrial load supply session, F. W. Cramer will

speak on "Electrical Power Supply for Steel Mill Loads." Mr. Cramer is an electrical engineer at the Carnegie-Illinois Steel corporation, Pittsburgh. Following his talk, S. L. Chapin of Sargent and Lundy, Chicago, will address the group on "Power Supply for Powerhouse Auxiliaries", and John S. Parsons of Westinghouse Electric and Manufacturing company, East Pittsburgh, Pa., will present a talk on "Electrical Distribution Systems for Industrial Plants."

The session on insulation problems on power systems is being sponsored and arranged by the power group of the Chicago section of the American Institute of Electrical Engineers. "Field Testing of Insulation" will be discussed by A. L. Brownlee of the Commonwealth Edison company, Chicago; "Transients in Electric Power Systems", by H. A. Peterson of the General Electric company, Schenectady, N. Y.; and "A Review of Present and Future Conditions in the Cable Field," by R. J. Wiseman, chief engineer for the Okonite company, Passaic, New Jersey.

A session on developments in heating will include papers on "Reverse-cycle Heating" and "Radiant Heating." They will be presented respectively by Philip Sporn, vice-president of the American Gas and Electric Service corporation, New York City, and T. Napier Adlam, chief engineer of the Sarco company, also of New York City.

Ralph A. Sherman, supervisor of the fuels division of Battelle Memorial Institute, Columbus, will open the fuels and combustion session with a talk on "Energy Sources of Tomorrow." Also appearing will be John I. Yellott, director of the Institute of Gas Technology, Chicago, speaking on "The Flas h Pulverizer."

"Problems of Water Conditioning in Plants Using High Percentages of Makeup," a paper by Leo F. Collins, chemical engineer at the Detroit Edison company, is scheduled on the feedwater treatment session. Similar problems in plants using low percentages of makeup will be discussed by S. F. Whirl,

"YOUR STAFF CORRESPONDENT AT ILLINOIS INSTITUTE OF TECHNOLOGY"
VICtory 7200 CHICAGO 16 3329 Federal

THIRD ADD MPC SPEAKERS

chief chemist in the power stations department of the Duquesne Light company, Pittsburgh, Pa.

The session on air conditioning developments will hear presentations on "Centrifugal Compressors," by W. H. Carrier, chairman of the board of Carrier corporation, Syracuse, N. Y., and "Cooling Tower Performance," by J. Lichtenstein, Foster Wheeler corporation, New York City.

Dudley W. Day, manager of the Burgess-Manning company, Chicago, will speak on "Exhaust and Intake Mufflers and their Effect on Performance of Diesel Engines." Also on the Diesel power session will be a talk on "The Turbo-supercharger and Its Effect on Performance of Diesel Engines," the speaker to be announced later.

Participants on the sessions on hydro power and on industrial power plants are still to be named.

The preliminary program of the conference will be available early in February.

WIRE SOUND RECORDER

The Armour Research Foundation has announced five new names which have been added to the roster of those who are licensed to manufacture the Armour Magnetic Wire Sound Recorder. These are E. H. Scott Radio Laboratories, Inc. and J. P. Seeburg Corporation, both of whom have Chicago plants; the Lawyt Corporation of Brooklyn, New York; Radiotechnic Laboratory, Evanston, Illinois; and Boosey & Hawkes, Ltd. of London, England.

Auditions, as well as scientific tests, including those covering frequency response and dynamic range, have demonstrated that the Armour development of recording magnetically on spools of wire nearly as fine as a human hair will give the world a reproduction of living performance of higher fidelity than the customary methods. This method does not use a needle, --- recordings may be played thousands of times without scratch or loss of fidelity. Developments are still under way, including a magazine containing the spools of wire to be interchangeable on all makes of machines. However, it is not expected that civilian production, especially in the home radio field, will be available until some time after the war. Plans call for simplicity of recording and playback which will satisfy a child operator.

Before the war the Scott organization specialized in fine custom-built, high-fidelity radios and record player combinations. Their recent developments, however, include a radio which makes it possible for submarine or surface ship crews to listen in to broadcast reception without danger of enemy detection through interception of the radio signal. Many Navy craft are now

m o r e

equipped with these Scott marine receivers.

Scott's license will cover the manufacture of new marine radio-recorders with single or multiple outlets and new home radio-recorder combinations which will enable the users to record and play back radio programs or play standard vocal or instrumental recordings on wire. Armour has also licensed Scott to manufacture recorders which can be used in connection with existing home radios to convert them into radio-recorder phonograph combinations.

J. P. Seeburg Corporation, one of the largest manufacturers of coin operated automatic phonographs, are licensed to incorporate wire recorders in these machines, and also to manufacture portable home phonographs as well as magnetic recorder adaptors for home radio sets.

With certain limitations, Seeburg has been granted special permission to make recordings for playback in machines of their manufacture.

The license granted to Boosey and Hawkes, Ltd. is one of the first that Armour has issued to a foreign manufacturer. This concern is rated as one of the world's foremost music publishers and musical instrument manufacturers, and owns copyrights on many of the finest musical compositions. Negotiations were completed when Mr. Ralph Hawkes and Mr. Philip T. Hobson, Chief Engineer for Boosey and Hawkes, recently came to Chicago for this purpose. Until post-war production is resumed, Boosey and Hawkes will manufacture Armour recorders for the British armed forces.

Lewyt Corporation, highly skilled in engineering and electronics, as yet have been licensed to manufacture for the United States Armed Forces only. This company is reported to have already done a large amount of development work in wire recording.

Likewise, Radiotechnic Laboratory of Evanston has a license restricted to war work, but has already carried on a great deal of development

m o r e

SECOND ADD WIRE SOUND RECORDER -

work on Armour recorder models for the Navy, and is now engaged in filling Government orders for airborne and ground type models.

DRAFT AND MANPOWER RULINGS

A ray of light shone on the clouded sports scene today with the statement by John J. Schommer, assistant on occupational deferments to the state selective service director, that in the new draft and manpower rulings he could see no threat to collegiate athletics nor to pro football.

Schommer, director of athletics at Illinois Institute of Technology, one of Chicago's all-time athletic greats, and a Big Ten football official until a few years ago when he changed over to calling them for the pros, said that he couldn't believe new rulings would ever be interpreted to compel 4-F's and 1-AL's to quit college and go to work in war plants.

"Collegiate athletics today." he said, "depend on four main groups:

"First there are the boys under eighteen whom the new ruling does not affect.

"Second are the 4-F's, whom the army does not want and whom it would be foolish to remove from school. There they are getting an education which could immeassurably increase their value to the war efforet.

"Third are 1-AL's, men whom the army also doesn't want as they again do not quite reach the physical standards required.

"Fourth are the men over 26 who have been left in college by their draft boards after the army asked for fewer inductions in the upper age bracket".

FIRST ADD DRAFT AND MANPOWER RULINGS 4514-13

This leaves collegiate athletics in pretty much the status quo, Schommer believes. He added that for a different reason the same would hold true for pro football.

"Many of the pro football men", Schommer said, "are contributing their share to the war effort". They are 4-F's and 1-AL's, as well as, men in the upper age brackets. Some are physicians, dentists, engineers, and many others are working in defense plants.

He asked, "If they can get an extra four or five thousand a year for working Sunday afternoons, can you blame them?"

ELECTRICAL

CHICAGO, ILL. - Two new courses having a direct bearing on the operation of the war will be offered by the electrical department of Illinois Institute of Technology's war training program in the term opening January 22.

One concerns the theory and measurement of telephone transmission lines, while the other deals with power system studies.

The telephone transmission study has been planned to train men for more skilled engineering, testing, and maintenance work on long distance telephone equipment. The course is to be taught by John H. Van Horn, who divides his time between Illinois Tech's war training program and its regular college instruction.

The other course will be particularly concerned with the solution of power distribution problems for companies supplying electrical power to war industries. Illinois Tech's new network calculator, which makes possible the setting up of a complicated power system in miniature, will be utilized in these studies. Taught by Lester LeVesconte, the course will be under the general supervision of Dr. W. A. Lewis.

Each of the twenty-five courses scheduled for the new term

-m o r e-

HayakawA

CHICAGO, ILL. - "Fixed ideas and dogmas implanted in the minds of students too often lead to misinterpretations of a passage they read or crowd out entirely the meaning of the statement it contains", said Dr. S. I. Hayakawa, associate professor of English of English at Illinois Institute of Technology, in his talk before the American Association of University Women, yesterday afternoon.

His topic, "Psittacism", he explained "is the habit of repeating in parrot-like fashion familiar cliches and formulas simply because one has heard them before." He expressed the belief that an important way of reducing this common tendency is to make the students aware of the vast amount of psittacism that passes for thought.

After describing people who habitually project their opinions into whatever they read, so that everything they read becomes simply a mirror in which they find their own thoughts, Dr. Hayakawa concluded, "Then it makes no difference whether they read "good bookd" or "Trach".

A.I.E.E.

CHICAGO, ILL. - Four staff members of Illinois Institute of Technology will go to New York City next week to take part in the winter technical meeting of the American Institute of Electrical Engineers at the Biltmore hotel.

Dr. T. J. Higgins, associate professor of electrical engineering, will present papers before the basic sciences and industrial distribution sessions.

The three other men will attend sessions of technical committees on which they hold membership by virtue of their special qualifications in the field. The committees are responsible for developing standards for electrical engineering throughout the United States.

Dr. W. A. Lewis will participate in four such conferences. He is chairman of the committee on research and the subcomittee on relays and also holds membership in the protective devices and basic sciences groups. Dr. Lewis is research professor of electrical engineering at Illinois Tech.

Dr. Jesse E. Hobson, director of Armour Research Foundation, an affiliate of Illinois Tech, will meet with the committees on basic sciences and on power transmission and distribution.

Representing the school on the subcommittee on transformers will be F. J. Vogel, professor electrical engineering.

INTER-VARSITY CHRISTIAN FELLOWSHIP

CHICAGO, ILL. - Members of the new chapter of the Inter-Varsity Christian Fellowship at Illinois Institute of Technology held their first meeting January 17. The announcement of the organization's founding on the Illinois Tech campus was made today by Charles A. Tibbals, dean of students.

Charles Tatter, senior chemical engineering student, is one of the principle organizers of the chapter which is part of the international society, originally founded at Holy Trinity Church in Cambridge, England. The students will meet for prayer, and study of the Bible, the missions, evangelism, and apologetics.

Illinois Tech has joined the ranks of 150 other American colleges and universities that have chapters of the society of the campus. Mrs. Philip D. Armour, wife of one of the school's trustees, is a member of the Inter-Varsity Board.

BOTTLERS' COURSE

CHICAGO, ILL. - A three-weeks' course designed to give basic training in the soft drink industry will open January 29 at the west side campus of Illinois Institute of Technology, 1951 West Madison Street.

Given by the school and the American Bottlers of Carbonated Beverages, the course will deal with many phases of beverage production and plant operation in an effort to meet the growing need for trained technicians and oro-duction personnel in the soft drink field.

Paul G. Andres, associate professor of electrical engineering at Illinois Tech, and Dr. L. R. Hedrick, head of the biology department, have been in charge of arrangements for the training program. Dr. Hedrick serves as educational supervisor, with Kenneth J. Warren assisting him with phusical arrangements.

Enrolled for the course are approximately 100 men in the beverage industry who have made application and received their assignments through the national headquarters of the American Bottlers of Carbonated Beverages. The maximum enrollment has already been reached, Dr. Hedrick said, and it will be impossible to accept new applications.

Instructors will be faculty members at Illinois Tech and specialists in the carbonated beverages industry, as well as three men in the field of public health.

m o r e

FIRST ADD BOTTLERS' COURSE 451-21

Those serving from Illinois Tech will be Henry P. Dutton, chairman of business and economics at the school; H. J. McDonald and L. F. Supple of the chemistry department; Dr. R. C. Kintner, professor of chemical engineering; A. L. Mell, assistant professor of architectural design; E. Clark Woodward, director of war safety training, and Dr. Hedrick.

Assigned by the bottlers' association as instructors are J. H. Buchanan of J. H. Buchanan and Associates; Dr. W. C. Cooper, Meyer Manufacturing corporation, Cudahy, Wisconsin; C. E. Davis, Foote and Jenks, Jackson, Michigan; H. B. Gustafson, Infilco company, Chicago; James Kantor and G. M. Chapman, Liquid Carbonic corporation, Chicago; C. M. Moore, Diversey corporation, Chicago; and J. H. Toulouse, Owens Illinois Glass company, Toledo, Ohio.

Public health specialists participating will be John R. Baylis, engineer of water purification for the City of Chicago's department of public works; E. G. Huffer of the state department of public health at Springfield; and Dr. F. W. Mohlman, director of laboratories for the Sanitary District of Chicago, who is also adjunct professor of sanitary chemistry at Illinois Tech.

Morning and afternoon sessions will be held Monday through Friday, with tours of soft drink plants on Saturday. The group will visit the Pepsi-Cola Bottling company February 3 and the Coca-Cola Bottling company Feb. 10.

The course at Illinois Tech is one of three such training programs sponsored by the American Bottlers of Carbonated Beverages. Others are to be held at Drexel Institute of Technology, Philadelphia, Pennsylvania, and Texas A. and M. College, College Station, Texas.

WAGE PAYMENTS

CHICAFO, ILL. - Temporary wage payment plans, now in vogue as a means of raising wartime salaries and thus retaining employees, were criticized today by Henry P. Dutton, chairman of the industrial engineering department at Illinois Institute of Technology.

Speaking before staff members of Albert Ramond and Associates at a luncheon meeting at the Drake hotel, Mr. Dutton cited the disadvantages of plans which involve "profit-sharing" for employees, such as when management divides with workers all savings over the existing rate of output.

Such plans are likely to lead to difficulties, he said, because management may be unable to foresee possible output changes under the plan and may thus commit itself to promises which it would be difficult to keep should production rise substantially.

Under pressure of wartime conditions, there has been a demand for wage payment plans which could be placed in operation over night, the speaker pointed out. The establishment of plans without accurate study of standards causes much confusion later, he said.

The old-fashioned plans of paying by piece rate or of giving a straight bonus for a worker's savings to the company are most stable and most satisfactory in the long run for both workers and management, according to Mr. Dutton.

MC KINLEY

"Freedom is not a gift to be handed to any race, nation, or individual - it is a condition which has to be won," Dr. E. T. Walker, acting dean of arts and sciences at I llinois Institute of Technology, told McKinley high school graduates at their commencement exercises last night in the auditorium of the school, 2040 West Adams street.

"The artificial restraints of slavery, or tyranny, or autocratic power may be taken away and the individual or people will have the chance to become free, but freedom is much more than the removal of such restraints," he said.

"Freedom is a state of mind which always reaches forward. Each step in your preparation widens your horizon and removes the barriers to your freedom, but it depends upon you what you do with the opportunities for freedom. Freedom is never complete, but always is reaching out. A freedom which satisfies us today is insufficient for tomorrow.

"After this war is over there will be the tremendous problems of peace. In these the country expects the high school graduate to do his part. Whether the questions that come before you are decided wisely or otherwise will be determined in large part by whether you have become free in spirit and above the lures of self-seeking men and demagogues. If you have developed into free men and women, the future of our country is secure."

SNOW BALL DANCE

The freshman and sophomore classes of Illinois Institute of Technology will sponsor the "Snow Ball", all school informal dance, February 3, in the grand ballroom and century room of the LaSalle hotel.

Music for the civilian and Navy V-12 students from three divisions of Illinois Tech, the west and south campuses and George Williams, will be furnished by Roy Milton's orchestra.

In charge of arrangements are the two class presidents, sophmore A/S Witold Kosicki of Detroit, and freshman Leo Schmidt of Chicago, and the social chairmen, A/S Al Kukral of Riverdale and Race Wilt of Chicago.

Sophmores serving on the committee are: A/S DeWitt Pickens, A/S Herbert Taylor, A/S Charles Hatstat, Robert Loomis and Robert Spitzig.

FRESHMAN SCHOLARSHIPS

CHICAGO, ILL. - Nine mid-year graduates of Chicago high schools have been awarded freshman scholarships to Illinois Institute of Technology, it has been announced by Dr. C. A. Tibbals, dean of students.

Each scholarship provides free tuition for two terms starting in March. The awards were made on the basis of competitive examinations held January 6. They are valued at $400 each.

Winners in the engineering division are Harold Aaron Bergen, 3743 West Windsor avenue, and David Henry Ross, 4013 North Francisco avenue, both of Roosevelt high school; James A. Finlayson, 1817 South Springfield street, of Crane Tech; Herman L. Patt, 2640 Haddon avenue, of Tuley; and C. Giles Smith, 3023 Union avenue, of St. Ignatius. The five won over sixty-seven other contestants.

Four were named as winners in the division of arts and sciences: Miss Shohona Eatman, 1257 South Lawndale, and Miss Geraldine Kaplan, 1523 South Ridgeway, both of Marshall high school; Miss Marlys Hewitt, 4022 North Monticello, of Roosevelt, and Peter Pinto, 3752 West Chicago avenue, of Austin.

MECHANICS LAB

CHICAGO, ILL. - The organization of a mechanics and aeronautics research laboratory to carry on long-time fundamental research in the field of solid and fluid mechanics has been announced by Illinois Institute of Technology.

The laboratory will work in close cooperation with the mechanics and civil engineering departments and with Illinois Tech's Armour Research Foundation.

Dr. L. H. Donnell has been named director of the laboratory and Dr. LeVan Griffis, associate director. Both also serve as teachers of mechanics at Illinois Tech.

Mr. Donnell, who has been on the school's staff since 1939, was in charge of stress analysis and structural research for the Goodyear Zeppelin corporation for six years. Previously he headed the aeronautical structures laboratory at California Institute of Technology at Pasadena.

Dr. Griffis, who received both his undergraduate and graduate training at California Institute of Technology, had charge of the impact laboratory there before coming to Illinois Tech in 1941.

Four graduate students, two mechanics, and a secretary assist the directors.

To help with financing the laboratory, sponsored projects

m o r e

will be accepted from outside organizations interested in research in solid and fluid mechanics.

Mr. Donnell indicates that the laboratory will undertake research in its broadest and most fundamental aspects rather than limiting itself to small, specifically detailed projects. He asks, therefore, that sponsoring agencies specify their problems in the broadest possible aspect. Problems for which ideas and plans have already been projected include the following:

The General Problem of Failure of Materials

Criteria for the three basic types of failure and other post-failure problems; significance of residual stresses in relation to failure; meaning and practical significande of ductility measurements and of impact tests; practical applications, including material cutting and forming operations, and failure of wire rope and of gear teeth.

Buckling Problems

The effect of imperfections of share and elasticity on columns; development of complete and usable rational column theory; effect of imperfections on local buckling of thin curved sheet under axial stress; clearing up of present discropancies in theories; extension of study of effect of imperfections to other cases.

Airfoil Problems

Astudy of several methods for reducing induced drag and their practical value, a study of airfoil sections by the use of adjustable models; a study of interference effects produced by dihedral angles.

Problems in the Mechanism of Turbulance

Relation between wall roughness, turbulence, and friction loss; relations between roughness, turbulence, particle properties, and transportation of solids.

m o r e

SECOND ADD MECHANICS LAB 451-26

The laboratory will encourage and attempt to facilitate research by Illinois Tech faculty members who otherwise might find it difficult. It will assist researchers by supplying and maintaining equipment and performing certain technical procedures.

An advisory council, representing industry, engineering socicties, and certain governmental agencies, has been formed. Participating are H. C. Boardman, head of research for the Chicago Bridge and Iron company; Dr. W. F. Durand, chairman of the National Research council's Division of Engineering and Industrial Research; Dr. J. N. Goodier, chairman of the applied mechanics department at Cornell university; Dr. G. W. Lewis, director of aeronautical research for the National Advisory Committee for Aeronautics; Prof. H. F. Moore, research professor of engineering materials at the University of Illinois; Dr. A. Nadai, consulting engineer for the Westinghouse Electric and Manufacturing company; and Dr. S. Timoshenko, professor of theoretical and applied mechanics at Stanford university.

MECHANICS LAB

CHICAGO, ILL. - The organization of a mechanics and aeronautics research laboratory has been announced by Illinois Institute of Technology.

The laboratory will carry on long-time fundamental research in the field of solid and fluid mechanics. It will correlate and encourage research in this field done at Illinois Tech, working in close cooperation with the mechanics and civil engineering departments of the school and with Illinois Tech's Armour Research Foundation.

Dr. L. H. Donnell has been named director of the laboratory and Dr. LeVan Griffis, associate director. Both also serve as teachers of mechanics at Illinois Tech. Mr. Donnell was formerly in charge of stress analysis and structural research for the Goodyear Zeppelin corporation, and of the aeronautical structures laboratory at California Institute of Technology at Pasadena. Dr. Griffis had charge of the impact laboratory at California Tech before coming to Illinois Tech in 1941.

Cooperating with Illinois Tech in financing the program will be organizations interested in the research, which will act as project sponsors. Four such organizations are now sponsoring work. the Welding Research committee, the Chicago Bridge and Iron company, the Wire Rope Manufacturers' Association, and the War Metallurgy committee.

Mr. Donnell indicates that the laboratory will undertake research in its broadest and most fundamental aspects, rather than limiting it-

m o r e

self to small, specifically detailed projects. Many of the problems scheduled for study, however, have definite practical applications, he said.

Among them is the problem of the physical laws involved in recent ship failures, a study sponsored by the National Defense Research committee. Such failures, many of which have occurred even before the ships were completed, have interfered seriously with transport of war supplies. Some of the fundamental properties of the welded steel from which the ships are made are being studied, and it is hoped that the research will lead to needed improvements in the design of ships.

A project of importance to the design of airplanes is that of reducing induced drag - the resistance to motion of the wing when a plane moves through the air. If this resistance can be reduced, the design of wings may thereby be improved.

An advisory council, representing industry, engineering sociaties, and certain governmental agencies, has been formed. Participating are H. C. Boardman, head of research for the Chicago Bridge and Iron company; Dr. W. F. Durand, chairman of the National Research council's Division of Engineering and Industrial Research; Dr. J. N. Goodier, chairman of the applied mechanics department at Cornell university; Dr. G. W. Lewis, director of aeronautical research for the National Advisory Committee for Aeronautics; Prof. H. F. Moore, research professor of engineering materials at the University of Illinois; Dr. A. Nadai, consulting engineer for the Westinghouse Electric and Manufacturing company; and Dr. S. Timoshenko, professor of theoretical and applied mechanics at Stanford university.

IGT MEMBERS

CHICAGO, ILL. - The addition of four companies to membership in the Institute of Gas Technology at Illinois Tech has been announced by John I. Yellott, director.

They are Hanlon-Buchanan, Inc. Tulsa, Oklahoma, a natural gasoline company; the Columbia Engineering corporation, New York City, a service company for the Columbia Gas and Electric corporation system; the Derby Gas and Electric company, which serves Derby, Conn., and surrounding communities; and Dresser Industries, Inc. Olean, New York, which is composed of thirteen subsidiary companies.

"The four new companies bring the total number of member companies to 66," Mr. Yellott said. "This reflects the steadily increasing interest on the part of the gas industry in the institute's program."

To help finance the work of the institute, member companies sign a ten-year agreement providing for annual payments on the basis of their net income. In return they have the benefit of the fundamental and applied research carried on by the institute in the production and utilization of natural and manufactured gas. Among its other services to its members, the institute undertakes specific research projects, offers consultation relative to technical problems, and makes available the resources of its technical library.

In peace time the institute carries on a program of advanced training of graduate chemical engineers, with particular emphasis on the problems and techniques of the gas industry. This program is now suspended but will be resumed as soon as possible.

ABCB REGISTRATION

CHICAGO, ILL. * Representatives from soft drink plants in all parts of the country assembled in Chicago this week to attend a three-weeks' course in beverage production and plant operation. The course is given jointly by Illinois Institute of Technology and the American Bottlers of Carbonated Beverages.

The registrants have come from Georgia, Massachusetts, Washington, and Texas, as well as eleven other less distant states, where they hold managerial, production, and engineering positions in their respective plants. The group also includes two men from Hawaii and Puerto Rico. Three women are enrolled.

At the west side campus of Illinois Tech, 1951 West Madison street, they are hearing various phases of the soft drink industry discussed by faculty members of Illinois Tech, experts in the beverage industry, and public health specialists. On Saturday they plan to visit the Pepsi-Cola Bottling company here and the water purification plant at Highland Park.

John J. Riley, secretary of the American Bottlers of Carbonated Beverages, came from Washington, D. C., to assist in the arrangements. Dr. L. R. Hedrick, chairman of the department of biology at Illinois Tech, is educational supervisor.

ARF APPOINTMENTS

CHICAGO, ILL. - Dr. Jesse E. Hobson, director of the Armour Research Foundation of Illinois Institute of Technology, has announced the addition of four persons to its staff.

Dr. John E. Barkley comes to the foundation as associate chemist. He has had experience as a research chemist for the Tennessee Valley Authority at Wilson Dam, Alabama, and as control chemist for the Central Kansas Power company at Hays, Kansas. For three years he was associated with the chemistry department at Ohio State university.

A metallurgist doing research work at Armour Research, George E. Hall, Jr., was formerly technologist in metals for the U. S. Quartermaster corps. He is a graduate of Clark university, Worcester, Massachusetts, and received a master's degree from Boston university.

Arthur S. Leonard has joined the staff to do research in thermodynamics. He was formerly associated with the Standard Oil Company of California, where he worked in the engineering and research and development departments, and with the State College of Washington, Pullman, Washington, as magnesium foundry control technician. He also done research at the agricultural experimental station of the University of California, from which he received both the bachelor's and master's degrees.

Dr. V. L. Streeter, who has been teaching civil engineering

m o r e

FIRST ADD ARF APPOINTMENTS 452-1

at Illinois Tech since 1941, has been transferred to Armour Research as supervis-
or of fluid mechanics in the engineering mechanics section. Dr. Streeter worked
as an engineer with the U. S. Bureau of Reclamation in Denver for five years and
later was associate hydraulic engineer for the Inter-Boundary Commission between
the United States and Mexico.

CITIZENSHIP

CHICAGO, ILL. * A project designed to awaken a substantial majority of Chicagoans from their apathy in regard to civic affairs will be launched next month when Virgil Peterson, director of the Chicago Crime Commission addreses a "Citizenship Luncheon" open to college men and women in Chicago and vicinity.

The meeting initiated by the alumni of the Illinois Institute of Technology and sponsored by the alumni of that institution, the University of Chicago, Northwestern and Loyola will be held at 12:15 p.m., Thursday, March 15, in the Georgian Room of Carson, Pirie, Scott and company.

Frederick Faville, president of the Carnegie Tech alumni association of Chicago, who will serve as the chairman of the meeting, sees in the program an opportunity for showing the college-trained persons in the community that civic affairs are vital to their well being and that they should be vitally interested in their local, state and national governments. The president of the National Foundation for Education in American Citizenship, Samuel R. Harroll of Indianapolis, will also be present and discuss briefly the work of his organization.

Reservations have been limited to two hundred with the Illinois Tech alumni office. 79 West Monroe street, handling these.

CHICAGO, ILL. - A/S Charles Hatsel, Jr. won a decisive victory in the Golden Gloves boxing tournament in Chicago, January 31, representing Illinois Institute of Technology, where he is a senior [illegible] of the Navy V-12 unit, the welterweight defeated Johnny Fabbrini of Madison, Wis.

The son of Mr. and Mrs. Charles Hatsel of Intervale Rd., Rutland, he has a service record of three years of sea duty, as well as three campaign ribbons, European, American, and Pre-Pearl Harbor. He served aboard the U.S.S. Washington as an electrician's mate.

In March, 1944, he entered Illinois Tech, where as a freshmore he is majoring in electrical engineering. He was graduated from Rutland High school in 1940.

HUGHES SPEECH

"I'd like to see this war end next week, but I'm taking bets that we'll fight the Japs for the next five years", said John B. Hughes, correspondent and news commentator, in a talk yesterday at Illinois Institute of Technology.

In answer to the statistics that show the Japs cannot produce supplies to last for five more years of fighting he pointed out that we cannot evaluate their resources by our standards.

"We Americans would rather waste 100 rounds of ammunition than 100 men", he said."The Japs reverse the theory."

Recently returned from the battle on Leyte with the 24th division, Hughes had an opportunity to observe both the Japanese and the Filipino people. "It's strange", he said, "how a Jap in a tight spot will kill himself rather than fight back or surrender."

"That's part of the psychology with which he has been indoctrinated. Conduct for war prisoners is not part of the Japanese military code. When a Jap is taken prisoner he is terrorized by the fear of torture. Then he becomes numb with the realization that he has disgraced his family and failed his emporer. After two or three days of good food he talks freely and

"YOUR STAFF CORRESPONDENT AT ILLINOIS INSTITUTE OF TECHNOLOGY"
VICtory 7200 CHICAGO 16 3329 Federal

gives information that reveals he has never been trained to be a prisoner of the enemy".

Consequently, rather than risk surrender a Jap annihilates himself, Hughes said. He told of an incident on Leyte:

"There were six of us, all correspondents, who decided to investigate a small shack in the hills. There was an explosion as we approached. When we got there we found the remains of two Jap soldiers. We had been in the open and they were under cover, but since they were isolated from their troops, the fear of being taken prisoner, kept them from firing."

In contrast to the Japanese spirit was his description of the Filipinos. He told of their loyalty to democracy and to the United States.

"When the American soldiers arrived on Leyte, there wasn't a house in the towns that did not fly an American flag. Those flags had been buried for 2½ years, while the people were subjected to occupation by the Japs. Education had gone on underground and the guerillas had never stopped fighting. The townspeople pretended collaboration with the Japs to gain information for those fighting in the hills.

"The Filipinos are what people said could never be, a blending of oriental and occidental cultures, and the Filipinos may well be proud of both cultures", Hughes concluded.

VITAMINS

A study of vitamins is the new reading course Dr. Ruth Clouse, chairman of the home economics department at Illinois Institute of Technology, will conduct next semester on the schools's west side campus, 1951 Madison st.

Since the class will meet Tuesdays and Fridays from 4:35 until 6 p.m., students as well as teachers, housewives, and people working in industry will be able to attend. Dr. Clouse will survey the value and importance of vitamins in the daily diet and suggest supplementary reading.

Registration will be open March 1 and 2 for the class which begins March 7.

POWER MEET

Chicago, Ill. - Stanton E. Winston, director of the Midwest Power conference, has announced that the application of the conference before the War Committee on Conventions has been denied and the conference scheduled for April 9 and 10 at the Palmer house, has been cancelled.

This would have been the eighth annual meeting of the conference bringing outstanding men in the power field to Chicago. The conferences have been sponsored by Illinois Institute of Technology, with other educational institutions and technical societies co-operating.

Winston also said there would be no publication of the papers planned for this year's conference.

The conference, however, will be resumed as an April feature as soon as wartime regulations permit.

WESTINGHOUSE FELLOWSHIP

CHICAGO, IDL. -- President Henry T. Heald of Illinois Institute of Technology announced today that a graduate fellowship in power systems engineering has been established at Illinois Tech by the Westinghouse Educational Foundation of Pittsburgh.

The recipient of the award will be selected jointly by Westinghouse and Illinois Tech. He will be provided with funds for tuition, equipment, and general expenses for a period of three semesters. The amount of the grant will depend on the individual's previous experience and educational background.

Two of the three semesters are to be spent in graduate study and a third in research. The study will involve use of the network calculator soon to be installed at Illinois Tech. The calculator, one of only nine such devices in the world, represents a miniature power system by means of which precise solutions can be found for complicated power problems.

The holder of the fellowship will be expected to do research on the use of the calculator in the analysis of power systems. On completion of the work, he will be eligible for a master of science degree.

The fellowship has been established for a period of one year but is subject to renewal by the Westinghouse foundation from year to year.

MACELWANE

"The new science of geophysics is somewhat like a department store", said Rev. James B. Macelwane, S. J., Ph. D., director of the geophysics department, St. Louis university, St. Louis, Mo., in his lecture Wednesday night (Feb. 14) before the Illinois Institute of Technology chapter of Sigma Xi, honorary research society.

Explaining his statement he said, "Geophysics gathers together under the same roof many different disciplines that have one important characteristic in common. They all apply physical principles, methods, and apparatus to the study of the earth and its envelopes."

Father Macelwane defined and illustrated with slides and drawings the applications of geoelectricity, geomagnitism, geodesy, and seismology.

He concluded that in spite of the limitations of the geologist, "he has given us a fairly accurate picture of the first few hundred feet of the crust over a surprisingly large part of the globe".

GAS INSTITUTE APPOINTMENTS

CHICAGO, ILL. - Two men, Morris Fisher and Dr. Sidney Katz, have been added to the technical staff of the Institute of Gas Technology, 3325 South Dearborn street, it has been announced by John I. Yellott, director.

Fisher, a specialist in micromeritics, the science of small particles, has been assigned to work on an improved method of producing carbon black, a paint pigment. He was a chemist for eight years with the U. S. Bureau of Mines at Pittsburgh, and during the last year has done research on a special project at Columbia university, New York City. He holds the bachelor and master of science degrees from Carnegie Institute of Technology, Pittsburgh, where he also taught chemistry.

Dr. Katz will work in the field of gas chemistry, particularly in the physical chemistry of fundamental gasification reactions. His first assignment is a special project for the National Research council.

Formerly research chemist for Goldsmith Brothers, Chicago, and for the Pfaustiehl Chemical company, Waukegan, Dr. Katz has served for two years as lecturer in mathematics at Illinois Institute of Technology. He received his Ph. D. at McGill university in Montreal, Canada, after earning his bachelor's and master's degrees at the University of Manitoba. In 1937 he was awarded a traveling fellowship in chemistry by the Royal Society of Canada.

A.B.C.B. Course

SPECIAL TO PEPSI-COLA WORLD

A tour of Pepsi-Cola's Chicago Plant was one of the highlights of interest when representatives of the soft drink industry in all parts of the country came to the city for a three-weeks' course in plant operation and beverage manufacture. The course was given jointly by Illinois Institute of Technology and the American Bottlers of Carbonated Beverages under a training program developed by the latter organization.

Enrollees in the course met in the plant's assembly room on the morning of February 3 to hear a brief message by Arthur Hardgrave (who identified himself as "the office boy around here—sometimes they call me president") before making the tour. There they heard outstanding features of the plant described and its financial status summarized.

They then spent nearly two hours observing the modern, efficient equipment in operation and listening to guides from the plant explain how it functioned. They had just completed the first week's sessions of five days of morning and afternoon classes at Illinois Tech's west side campus. Here at the Pepsi-Cola plant they had an opportunity to apply what they were learning by studying one of the largest soft drink plants in the world.

Or P

by wholesale one of the largest milk plants in the world.

at the Pleasantdale plant they had no opportunity to judge what they were learning
days of morning new efficiency classes at Illinois Dairy's west side center. Here
how it functions. They had just completed the first week's sessions of five
fficient equipment in operation and direction to guide them. The plant employs
onnaissance was the financial matter concerned.

They then spent nearly two hours examining the dairy's, el-
ckey) before meeting the boss. There they began particularly familiar of the plant
lecting himself a "big office boy around here"—meaning they could be pres-
ng morning of January 1 to spend a whole day under Professor Lyon
ssor Lyon's office by armed bare—knuckles they could be pres-
ed in the dairy business only in its most physical sense.
ssor Lyon's office by armed bare—knuckles they could be pres-

ng morning of January 1 to spend a whole day under Professor Lyon
ssor Lyon's office by armed bare—knuckles they could be pres-
ed in the dairy business only in its most physical sense.

FIRST ADD A.D.C.B. COURSE

Of particular interest to the group was the synchromatic system of bottling, which is only four years old. In the old-fashioned method, the flavored syrup and carbonated water are put into the bottles in separate operations. The bottle must then go to a third machine where the ingredients are mixed. The new method mixes all ingredients first, and thus only one operation is required to fill the bottles. The plant's mammoth refrigeration units was also of interest.

Greeting the members of the group as they arrived was comely Joyce-Edith Hegner, who at 19 was the youngest enrollee in the course and one of four women registered. Miss Hegner, who has been employed as laboratory technician at the plant since December, 1944, found the course of great value in orienting her for her work.

Nor was this her first experience with training at Illinois Tech. After her graduation from Crystal Lake Community High School in 1943, she enrolled in one of Illinois Tech's courses in industrial chemistry. Still enthusiastic about the training she received, Miss Hegner exclaimed, "The courses they offered you couldn't get anywhere else. It was just wonderful. I don't believe you could get that good a laboratory theory course in any other college in the country." Glad of the opportunity to go back to "good old Illinois Tech," Miss Hegner didn't mind posing for a picture "for the sake of my two loyalties - Pepsi and IIT."

From Miss Hegner's home to Illinois Tech's west side campus is only a few short miles. Other students, however, ran hundreds and even thousands of miles to attend. One was from Hawaii, another had only recently arrived in Chicago after working Puerto Rico. Four came from Georgia, and the states of Massachusetts, Washington, and Texas, as well as eleven other less distant states, were represented.

m o r e

SECOND ADD A.B.C.B COURSE

Who were the registrants and why did they come so far for this training? They were persons holding managerial, production, and engineering positions in their respective plants, who wished to take advantage of an unusual opportunity to supplement their experience in the soft drink industry with the well-rounded program of study offered. This included academic lectures of the industry presented by experts in allied fields, and sanitary and hygienic information given by public health specialists.

This special training was arranged to help meet the soft drink industry's need for trained technicians and production personnel after the war. It was instigated by the American Bottlers of Carbonated Beverages' research and technical committee, the chairman of which is Thomas Moore of Minneapolis.

Because of Illinois Tech's standing as a leading technical institution, it was chosen as one of the three schools to give the course. Others selected were Drexel Institute of Technology in Philadelphia and the Agricultural and Mechanical College of Texas, College Station, Texas.

The course was open to selected employees with sufficient education or plant experience to be able to derive the maximum benefits from such training.

John J. Riley, secretary of the A. B. C. B., came from Washington, D. C., to represent the association during the first week of the Illinois Tech course. Wade E. Medbery, its technical director, attended the later sessions. It was these two men who were responsible for the planning of the course.

Director of the course at Illinois Tech was Paul G. Andres, associate professor of electrical engineering, who made the preliminary arrangements. When Prof. Andres became ill, his duties fell to the lot of Dr. L. R. Heidrick, who also served as educational supervisor. He was assisted by Kenneth J. Warren, also of Illinois Tech.

HIRD ADD A.B.C.B. COURSE

Seven members of the school's staff participated in the eaching. Lecturing on the economic aspects of the soft drink industry was Henry P. utton, chairman of the departments of business and economics and of industrial engineering at Illinois Tech. Chemical problems of the industry were discussed by L. F. Supple nd H. J. McDonald, of the chemistry department. Dr. R. C. Kintner, professor of chemical ngineering, lectured on principles of refrigeration, and E. Clark Woodward, director of ar safety training, spoke to the group on plant operation, including efficient use of ersonnel and employee hygiene.

Architectural aspects of bottling plants was the subject of a alk by A. L. Mell, assistant professor of architectural design. He took up such probems as principles of construction of the plant, its relation to the surroundings, and ts accessibility. Dr. Hedrick, who is head of the biology department, lectured on sanitation, germicides, and bacteriological problems of the industry.

Specialized features of the soft drink industry, such as syrup aking, bottle washing, carbonation, bottling and filling equipment, flavoring materials, ere presented by qualified men in fields allied to the carbonated beverage industry. hey were J. H. Buchanan of J. H. Buchanan and Associates; Dr. W. C. Cooper, Meyer Manufacturing Corporation, Cudahy, Wis.; C. E. Davis, Foote and Jenks, Jackson, Michl; H. B. ustafson, Infilco Company, Chicago; James Kantor and C. M. Chapman, Liquid Carbonic orporation, Chicago; C. M. Moore, Diversey Corporation, Chicago; and J. H. Toulouse, wens Illinois Glass Company, Toledo, Ohio.

In addition, the students heard a talk on water treatment and urification by John R. Baylis, engineer of water purification for the City of Chicago's epartment of public works; a discussion of plant inspection with regard to sanitary facors by E. G. Huffer of the Illinois Department of Public Health at Springfield; and a ecture on sanitary and protective features of bottling plants by Dr. F. W. Mohlman,

-2-

OURTH ADD A.B.C.B. COURSE

irector of laboratories for the Sanitary District of Chicago, who is also adjunct pro-
essor of sanitary chemistry at Illinois Tech.

The A. B. C. B. is now working on plans to have training in
pecial phases of beverage manufacture introduced in regular college courses. Until such
plan goes in operation, however, the short courses, which the association hopes to spon-
rannually, will probably offer the best opportunity for training in all phases of bev-
rage production for soft drink personnel.

WESTINGHOUSE FELLOWSHIP

Next July a fortunate college graduate will begin his graduate training in power systems engineering at the nation's best equipped institution in the field--Illinois Institute of Technology in Chicago.

He will be the first recipient of a graduate fellowship recently established at Illinois Tech by the Westinghouse Educational Foundation.

For three semesters he will be provided with funds for tuition, equipment, and general expenses so that he can devote his time under expert instruction to a careful study of power systems engineering. On completion of the work, he will be eligible for the master of science degree and for a good engineering position with the Westinghouse company.

Not only to the recipient, will the establishment of the fellowship, be good news. Westinghouse and Illinois Tech also welcome it as another step in the long co-operation between the organizations. This will, as in the past, stimulate research in the college, and provide better trained personnel for the industry--a trend that is expected to become increasingly important in post-war years.

In recognition of this trend, the fellowship was set up by Westinghouse under a plan developed jointly by G. Edward Pendray, secretary of the Educational Foundation; A. C. Monteith, Westinghouse manager of industry engineering; and Dr. Jesse E. Hobson, a former Westinghouse engineer who until recently was director of electrical engineering at Illinois Tech and now heads the Armour Research Foundation of Illinois Institute of Technology.

FIRST ADD WESTINGHOUSE FELLOWSHIP

The objective of the fellowship is to train superior men in the field of power systems engineering, to give them experience on the network calculator, and to acquaint them with active research problems in the field of power systems engineering. The recipient of the award will be selected by a committee representing both Illinois Tech and Westinghouse. He will probably be either a recent graduate of Illinois Tech or some other recognized engineering school, a promising young engineer with some experience in utilities, or a young engineer employed by Westinghouse.

At the end of the first term, in which he will devote most of his time to study, the fellow will spend a week or two with the Westinghouse central station engineering group at East Pittsburgh in order to familiarize himself with its operations and problems.

During his second semester he will devote about half-time to study and half-time to work with power companies in their studies on the Westinghouse network calculator, recently purchased by Illinois Tech.

Two more weeks at East Pittsburgh will follow, at which time a research project will be outlined in conference with Westinghouse engineers. This project is expected to involve research on the network calculator. The fellow's third term will be devoted primarily to the research investigation.

Under the plan outlined, it is hoped to undertake research that is of vital importance to the industry and of particular interest to Westinghouse. The plan will have the advantage of offering a certain amount of background training in the field before research is begun. Close cooperation with Westinghouse engineering practices will permit the fellow to become acquainted with industrial developments in the field. Contact with the network calculator operator and with others making studies on the board should be of great value in acquainting him with practical problems of operation and design.

In addition, the fellow's accomplishments will be given recognition by the awarding of a master of science degree in electrical engineering.

In taking his training at Illinois Tech, the holder of the fellowship

SLAGER

Special to the Leader.

CHICAGO, ILL. - Donald M. Slager is the winner of the Eustice scholarship at Illinois Institute of Technology it was announced today by Dr. Henry T. Heald, president.

A senior majoring in physics, Slager has held scholarships throughout his college career. He has been recipient of the competitive freshman scholarship, the Julia Beverage scholarship, and the Bernard Sunny scholarship.

His present award provides $200 for tuition for the semester beginning next week. Slager is vacationing in New York before returning to his studies.

At IIT he is a member of the mathematics club, the American Society of Mathematicians, Physicists, and Chemists, and Alpha Sigma Phi, social fraternity.

The son of Mrs. Mary Slager of 510 15th street North, Great Falls, he was graduated from Great Falls high school in 1943.

Stereotypes

Molders of public opinion who have produced in the public mind "a fictional Negro bearing little or no relation to reality" were censured by Dr. S. I. Hayakawa, associate professor of English at Illinois Institute of Technology, in a talk this morning (Feb. 28) before the Women's Division of the Chicago Urban League at the Y. W. C. A., 59 East Monroe street.

"The stereotype of a Negro who loves watermelon, shoots craps, totes a razor, and is either absurdly ragged or absurdly overdressed" could not exist were it not for cartoonists, actors, movie producers, writers, and public speakers, Dr. Hayakawa said.

The first aspect of the problem is to stop the creation of such stereotypes, he asserted. However, if social, professional and residential barriers were broken down, so that people of different groups could learn to know each other first hand, these producers of stereotypes might continue their work, but they would do no harm, for no one would believe them, he said.

INSTITUTE OF GAS TECHNOLOGY PER PERSONALS

Recent additions to the staff of the Institute of Gas Technology chemist for eight years with the U. S. Bureau of Mines at Pittsburgh, assigned to work on an improved method of producing carbon black; Dr. Sidney Katz, who will work in the field of gas chemistry; John Charles Foster, assigned to the coal and gasification section; and Hiroshi Nishi, joining the chemistry section.

"Gas Turbines and Jet Propulsion" was the subject chosen by John I. Yellott, director of the Institute of Gas Technology, for two recent addresses. He spoke February 12 before the Western Society of Engineers and the following evening before the Society of Automotive Engineers.

Benjamin Miller has resigned as technical assistant to the director of the Institute of Gas Technology, effective April 30. He will engage in independent consulting practice in New York and will continue to serve the institute as a consultant.

Dr. S. W. Martin has been appointed chairman of the A.G.A.'s technical subcomittee on analyses and tests.

Staff members of the Institute of Gas Technology and their guests enjoyed a roller-skating party at the White City rink on February 21.

GAS INSTITUTE STAFF

CHICAGO, ILL. - The Institute of Gas Technology at Illinois Tech gained two more staff members with the appointment this week of Hiroshi Nishi and John Charles Foster.

Nishi, who has been assigned to the chemistry section, earned his bachelor's degree in chemistry at Colorado State College in Ft. Collins. Foster studied mathematics for three years at Northwestern university and is now working toward his bachelor's degree at the University of Chicago. His duties will be in the coal and gasification section of the institute.

COOKING

Why cakes sometimes fail to rise as they should, carrots turn pale during boiling, and frostings don't get hard will soon be mysteries no longer to a group of young women students on the west side campus of Illinois Institute of Technology.

Beginning March 5, they will start an advanced course in experimental cooking under Dr. Evalyn Brinkman that will teach them to substitute science for the trial-and-error methods that often have such sad results in the home kitchen.

Offered for the first time by Illinois Tech's home economics department, the course is open to junior and senior students majoring in the field. While it is of particular interest to students planning to go into the field of experimental foods, the study is of practical value to any one who cooks, for she will learn the underlying reasons why some things turn out well and others don't.

The girls will conduct experiments in the chemical laboratory to find out how the chemical constituents of various foods behave. On the basis of her experiments, each girl will come to her own decision as to proper cooking methods. Then she will have a chance to try out her conclusions by cooking a small amount of the food in question. If she wishes, she can be her own guinea pig and use a taste test on herself.

GIFTS

CHICAGO, ILL. - Dr. Jesse E. Hobson, director of the Armour Research Foundation of Illinois Institute of Technology, today announced two recent gifts to the Foundation totalling $10,500.

E. J. Brach and Sons have contributed funds for the purchase of equipment for the chemical engineering section and technical books for the Foundation's library.

A donation from National Acoustic Products will be used to buy a frequency recording meter, an instrument for measuring the frequency of alternating current, which will be added to the equipment of the physics section.

30--30--30

Date: March 3, 1945

OHMITE GIFT

CHICAGO, ILL. - Dr. Henry T. Heald, president of Illinois Institute of Technology, today announced an initial grant of $15,000 from the Ohmite Manufacturing company to be used for the establishment of a laboratory for the precision measurement of electrical and magnetic quantities.

The gift, came through David T. Siegel, president of Ohmite company and a trustee of Illinois Tech. It represents the initial contribution for equiping what will be known as the Ohmite Laboratory for Precision Measurements. It will be constantly expanded as new equipment becomes available.

The laboratory's ultimate goal is to provide precision electrical measurements for the Chicago area approaching in accuracy those of the Bureau of Standards in Washington, D.C.

Working through the Armour Research Foundation, industries in the vicinity will have an opportunity to use the laboratory's facilities. This will be the first such laboratory in the Chicago area to make its services available to industry. As such, the establishment of this laboratory is a definite contribution to the scientific and research facilities of the area.

In addition, the laboratory represents an important addition to Illinois Tech's electrical engineering equipment, by means of which graduate students can be trained in precision electrical measurements. It will further provide standards for research work carried on at the Foundation.

m o r e

* * * *

FIRST ADD OHMITE GIFT

The laboratory itself will be located at the Armour Research Foundation of Illinois Institute of Technology and will be developed under the direction of Prof. E. H. Schulz, supervisor of electrical engineering laboratories, and L. W. Matsch, supervisor of electrical engineering in the Armour Research Foundation. Also on the committee supervising the laboratory's construction are Dr. H. A. Leedy, Dr. W. A. Lewis, Dr. Thomas C. Poulter, Raymond E. Zenner and Dr. James S. Thompson.

Space has already been reserved for the laboratory in the engineering building of the Research Foundation and equipment will be placed in operation as soon as it can be obtained under present wartime conditions. It is hoped that the basic elements will be operating within six months, although some of the needed equipment cannot obtained until after the war.

Mr. Siegel, in presenting the gift, stated the purpose of the laboratory as follows:

1. To provide facilities for studying the fundamental measurement of resistance, inductance, capacitance, current, voltage, power, power factor, permeability, etc., —basic quantities of electric and magnetic circuits and fields.
2. To provide calibration facilities for instruments and meters used in research and industry by affiliated organizations at Technology Center and by industries of the Chicago area.
3. To stimulate advanced training of the electrical engineering students at the Illinois Institute of Technology in the important field of precision measurements.

m o r e

* * * *

SECOND ADD OHMITE GIFT

In further commenting on the value of the laboratory, Dr. Jesse E. Hobson, director of the Armour Research Foundation, said, "In all electrical work careful measurement of the quantities used is essential. The Bureau of Standards in Washington maintains the most accurate standards. For convenience, however, it is highly desirable to have throughout the country intermediate standards almost as accurate as those in Washington and more precise than the usual commercial measurements. Our function here is to provide one of those intermediate stations."

Power companies, manufacturers of various kinds of electrical equipment, and colleges are among the organizations which will immediately benefit from the project.

SABINA TOURNEY

Illinois Tech's basketball squad last week resumed preparations for the St. Sabine A.A.U. Invitational Basketball Tournament under the direction of Bernard "Sonny" Weissman, assistant athletic director. The Techawks, who will swing into action Monday night against the Danly Machines, Cicero industrial quintet, will be without the services of their coach, Ed Wagner, who led them through one of the greatest seasons in Tech history finishing the season with thirteen straight wins and a .775 percentage.

Wagner, who came to Illinois Tech in 1942, recently resigned to accept a position in the chemical engineering department of the Witco Chemical company. During the last three seasons he has hung up the most successful record of any Tech coach on record, leading his cage squads to a total of 43 victories while losing only 14.

An Illinois Tech graduate and basketball captain, Wagner taught chemistry and took graduate work at the Institute in addition to his coaching duties. He received his doctor's degree in chemical engineering from the Institute on February 25.

In addition to the loss of their coach, the Techawk squad has lost three men from their varsity due to graduation, injury and ineligibility.

m o r e

FIRST ADD SABINA TOURNEY

Thus the nine-man squad which Coach Weissman will lead into the tourney will be entirely composed of Navy V-12 men.

During the regular season the team won a record breaking total of 17 games and lost 5. Only one opponent managed to vanquish the Techawks twice, DePaul's great aggregation, while losses to Glenview, the University of Chicago and the 87th Street Navy were balanced by Tech victories. Other squads defeated by the Techawks this season included Camp McCoy, George Williams, North Central, and Concordia each twice, and Wilson College, Gardiner General Hospital, Chicago Radio, Lawrence College, Illinois Medical and the 87th Street Marines.

CANTEEN

Marines in the Phillipines and doughboys on the western front may soon be able to quench their thirst with the same, pure drinking water that is available to civilians at home due to a unique development by the Armour Research Foundation of Illinois Institute of Technology in collaboration with Hawley Products company of St. Charles, Illinois.

The problem of supplying good water to advance units in the armed services has been difficult as they must rely on local water supplies which in many cases are dirty and contain harmful bacteria. Chemical treatment of this water often leaves an unpalatable taste.

The latest development in the purification of such water both removes the dirt and bacteria and renders the water tasteless and odorless through the use of a novel canteen filter. The filter device, only .125 of an inch in thickness, may be removed and changed as necessary.

In operation, the canteen is filled with water, clorinating pellets are dropped in to destroy harmful bacteria, and the filter is replaced. In subsequently using the canteen, the water passes through the filter, which is composed of activated carbon surrounded by a layer of fibrous felt. The solid foreign matter is removed by the felt, while at the same time the activated carbon renders the water tasteless and odorless.

m o r e

FIRST ADD CANTEEN

A single filter pad of this type will purify approximately two and one-half gallons of water containing 20 parts per million of chlorine. A further improvement in the bleeder valve assures an unusually high and steady rate of flow, enabling a full canteen to be emptied in approximately one minute.

NORTH CENTRAL TRACK MEET

Coach Roy B. McCauley will lead his 1945 Illinois Tech track squad into action on Saturday against North Central College at Naperville, Illinois. This will be the initial showing of the season for the Techawk team which has been working out at the Chicago Fieldhouse for the past few weeks.

Although Tech must be listed in the "unknown quantity" class at this stage, the return of a number of veterans from last year's outstanding cinder squad give promise for another fine season.

Headed by A/S Norm Hankins of Kokomo, Ind, holder of two school dash records, the Techawk squad will include J. A. Hammack, Hollandale, Miss.; R. D. Thomas, Bellevue, Ohio; Irving Alloy, Toledo, Ohio; Howard Wawrenuk, Willoughby, Ohio; W. P. Stewart, Allenville, Ill.; A. E. Waite, Detroit, Mich.; R. N. Thurston, Delaware, Ohio; G. M. Slaughter, Xenia, Ohio; A. E. Nieni, Warren, Ohio; R. R. Finger, St. Paul, Minn.; R. D. Anschicks, Riverside, Ill.; R. J. Lund, Chicago, Ill.; Ralph Schinke, Chicago, Ill.; R. C. Ezzel, Norman, Okla. and W. E. Sayles, Toledo, Ohio.

This meet will be in the nature of a warm-up for the North Central Relays on March 24 for both schools. Other tentative meets on the Illinois Tech schedule include:

March 31, AAU Indoor Championships, U. of C. Fieldhouse

TECH SWIMMING

CHICAGO, ILL. - The Illinois Tech swimming squad will send five representatives to a post-season engagement at the Central Collegiate Swimming Championships at East Linsing, Michigan, on Saturday.

Techawk chances took a severe blow when it was revealed by Coach "Sonny" Weissman that two of the team's star performers, Capt. Tom Lechner and Whitney Pearson, will be unable to take the trip. However, the quintet, composed of Hardman and Brill in the breastroke, Dauzvardis in the dashes, Axelrod in backstroke and Makielski in the diving event, should make a good showing. In addition to their individual specialties, the Techawk entrants will swim both the medley and 400 yard relays.

The 1945 tank team finished with a season record of two wins against three losses, hanging up a pair of victories over Lawrence College of Appleton, Wisconsin, while losing to three Big Ten squads, Illinois, Iowa and Northwestern.

Special to the Blade

CHICAGO, ILLINOIS - Irving Alloy, 2205 Sanford Drive, Toledo, Ohio, and
[illegible] graduated from Macomber Vocational High school in 1943 and William E. Davies, 7241
Lincoln Avenue, Toledo, Ohio, who graduated from Libbie High school in 1943 are mem-
bers of the Illinois Institute of Technology track squad which will open its season
Saturday with a dual meet against North Central College at Naperville, Illinois. Both
Alloy and Davies are members of the Navy V-12 unit stationed at Illinois Tech.

Although this is the first meet of the season for the Techmen, the
return of a large number of veterans from last year's record-breaking squad gives pro-
mise of another fine season. The team has been working out for the past few weeks at
the Chicago Fieldhouse under the direction of Coach Roy P. McCauley, former Olympic
Conference distance champion.

This meet will serve as a warm up for the North Central Relays to be
held March 24th. Other tentative meets on the Illinois Tech schedule include:

March 31, AAU Indoor Championships

April 7, Lawrence College and Morton Junior College triangular

May 12, Northern Illinois State Teachers

May 19, Lawrence College

June 2, Central Collegiate Conference Championships

CHICAGO, ILLINOIS -- Allen E. Waite, 14855 Lauder Street, Detroit, Michigan, who graduated from Cooley high school in 1942 is a member of the Illinois Institute of Technology track squad which will open its season Saturday with a dual meet against North Central College at Naperville, Illinois. Waite is a member of the Navy V-12 unit stationed at Illinois Tech.

Although this is the first meet of the season for the Techawks, the return of a large number of veterans from last year's record-breaking squad gives promise of another fine season. The team has been working out for the past few weeks at the Chicago Fieldhouse under the direction of Coach Roy B. McCauley, former Midwest Conference distance champion.

This meet will serve as a warm up for the North Central Relays to be held March 24th. Other tentative meets on the Illinois Tech schedule include:

March 31, AAU Indoor Championships

April 7, Lawrence College and Morton Junior College triangular

May 12, Northern Illinois State Teachers

May 19, Lawrence College

June 2, Central Collegiate Conference Championships

SABINA TOURNEY

CHICAGO, ILL. - Stock in the Illinois Tech basketball squad, which will play its opening game in the St. Sabina A.A.U. Invitational basketball tournament to-night against the Danly Machines of Cicero, took a decided drop to-day when it was learned that Capt. Tom Kilgariff will be unable to play.

Kilgariff, who this season sparked the Techawks to a record of 17 games won, has submitted to a minor operation. This brings to four the number of varsity men who will be unable to compete in this tourney due to sickness, ineligibility or graduation.

Together with Lane Tech, the Techawks are going into the tournament as co-favorites. Coach "Sonny" Weissman has taken over the squad this week, due to the departure of Coach Ed Wagner who left Illinois Tech at the end of last semester.

30--30--30

At Illinois Institute of Technology, the largest engineering school in the nation, athletics have always played a definite second-fiddle to studies. Unlike many "scholastic" institutions where sports are the major activity, at IIT they are necessarily subordinated to the curriculum of the 2500 future engineers who are normally enrolled in the Institute.

Despite this fact, athletics are the number one extra-curricular item on the Tartawk schedule and the amount for all sports is remarkable considering the unusually heavy load of classes that is carried by the average student.

Aside from members of the Naval V-12 unit at IIT, candidates for all sports must come from boys under eighteen years of age and those over eighteen who are physically unfit for the armed forces. Civilian enrollment has, of course, fallen greatly since the outbreak of the war.

In view of its Simon-pure policy, Illinois Tech's athletic department is an exceptionally well-organized, smooth-running group. It is headed by Athletic Director John J. Schommer, former athletic great at the University of Chicago, who is both tradition and friend to co-workers and students. "Uncle John" had been connected with

- S O T S -

the Institute since beginning graduate work there in 1910.

Assisting him is his assistant director of athletics, Bernard "Sonny" Weissman, who coaches baseball, boxing and wrestling in addition to the other detailed work that must be handled. The coaching staff is composed of faculty members who are willing to take time from their full-time teaching schedules to lead the various squads through intercollegiate and service schedules.

The Illinois Tech program is unusually complete, including participation in varsity programs of basketball, baseball, track, hockey, boxing, wrestling, swimming, indoor track, outdoor track, tennis, golf and rifle marksmanship.

Due to the enthusiasm of the students and the willingness of the faculty and administration to co-operate in furthering the sports program, Illinois Tech teams have hung up some outstanding records. Overcoming the handicaps of a decidedly limited amount of time for practice and a comparatively slim athletic budget, Techawk athletics have made a name for themselves in nearly all athletic competition.

Basketball is probably the most important sport at Illinois Tech. This season, under the direction of Dr. Ed Wagner, Coach, who formerly captained the Techawk five while a student at the Institute, the team set a new record of 17 victories, winning the last 13 in a row. In setting a season average of .775, the team's only unavenged losses were to DePaul, one of the nation's outstanding quintets.

This week the team carried on into the St. Sabina A.A.U. Invitational tournament, under the direction of Weissman, who took over Coach Wagner's duties when the latter departed at the end of last semester. The squad, composed almost entirely of Naval V-12 trainees, proved itself one of the finest in Techawk history and deserving of even greater recognition in that they had so little practice time available.

the Institute since beginning graduate work there in 1910.

Assisting him is his assistant director of athletics, Durward "Doug" Gutheman, who coaches baseball, boxing and wrestling in addition to the other detailed work that must be handled. The coaching staff is composed of faculty members who are willing to take time from their full-time teaching schedules to lead the various squads through intercollegiate and service schedules.

The Illinois Tech program is unusually complete, including participation in varsity programs of basketball, baseball, track, hockey, boxing, wrestling, swimming, indoor track, outdoor track, tennis, golf and rifle marksmanship.

Due to the enthusiasm of the students and the willingness of the faculty and administration to co-operate in furthering the sports program, Illinois Tech teams have hung up some outstanding records. Overcoming the handicaps of a decidedly limited amount of time for practice and a comparatively slim athletic budget, Techmen athletics have made a name for themselves in nearly all athletic competition.

Basketball is probably the most important sport at Illinois Tech. This season, under the direction of Dr. Ed Wagner, Tech, who formerly performed the feature play while a student at the Institute, the team set a new record of 17 victories, winning the last 13 in a row. In setting a season average of .775, the team's only unavenged losses were to DePaul, one of the nation's outstanding quintets.

This week the team carried on into the St. Louis A.A.U. Invitational tournament, under the direction of Coach Wagner, who took over Coach Wagner's duties the latter departed at the end of last semester. The squad, composed almost entirely of Naval V-12 trainees, proved itself one of the finest in Tech's history and deserving of even greater recognition in that they had so little practice time available.

The track team, now working out under Coach Roy B. McCauley, an instructor in metallurgy and a graduate student himself, will enter its first major meet next Saturday when it competes in the North Central Relays. A dual meet with North Central last week served as a warm-up for this event.

In the absence of an urgently needed fieldhouse of its own, the cinder squad holds its workouts at the University of Chicago fieldhouse. With a number of veterans from last year's team, which recorded Illinois Tech's first victory in a quadrangular meet in a decade and finished second in the Central A.A.U. meet, the outlook for the season is promising.

An annual pre-war feature on mid-west track schedules were the Illinois Tech Relays, one of the most outstanding invitational meets in the nation. In the 1943 Relays, the fifteenth running, thirty-six universities and colleges competed for the various titles. Although the meet is a war casualty, plans are already set up for reviving the affair on its previous scale as soon as conditions permit.

The entire spring sports schedule, which will get under way as soon as milder weather arrives, will be unusual in its completeness. Baseball, golf, tennis and outdoor track squads will compete simultaneously against other college and service teams.

Baseball has traditionally been one of the most important activities as far as student interest is concerned. Last season's aggregation wound up with a season record of eight wins, five losses and two ties against some of the best competition in the area.

Tennis and golf teams, normally in the minor sports category, may prove unusually strong due to the return of a number of men from last year's groups as well as several outstanding newcomers. Full schedules will be provided for both these teams.

This winter the swimming squad was unfortunate only in that it was unable to schedule matches with other colleges in the vicinity. Two victories over Lawrence

- m o r e -

College of Appleton, Wisconsin, were chalked up, while good showings were made in losses to Illinois, Iowa, and Northwestern, all of whom had powerful and well-balanced teams. Five members of the Techawk squad post-mortemed at the Central Collegiate Swimming Championships last week.

Boxing and wrestling also receive a good deal of support from students, and turnouts are always large. Coach Weissman, a well-known official in his own right, handles both of these sports. The wrestling team, having completed its regular season with a record of two wins against three losses, will enter the A.A.U. wrestling meet the first of next month. Activities of the boxing squad this season ~~piledlupgalyeofrdn breakinguadtnatufeeighteen.~~

This season's rifle squad piled up a record-breaking total of eighteen victories to establish one of the finest records ever recorded by an Illinois Tech team. A sixteen-man hockey squad was organized this winter but did not enter competition.

One of the most popular programs is the intramural schedule, which includes such sports as basketball, bowling, ping-pong, golf, tennis, boxing, wrestling, track, swimming and baseball. Approximately 50 per cent of the men enrolled in day school entered into this program during the past year. Regular schedules and tournaments are held in each of these activities, providing an opportunity for all students to participate.

In addition, the physical education classes during the past year have taken in 523 men, not including the regular compulsory navy classes which number about 525 participants. Thus the present total enrollment in physical training and athletic activities, excluding the navy conditioning program, is at present 1161. This is well below the normal, peace-time average of approximately 1800.

Colleges of Appleton, Wisconsin, were chalked up, while good showings were made in
losses to Illinois, Iowa, and Northwestern, all of whom had powerful and well-balanced
teams. Five members of the Tuesday squad participated at the Central Collegiate Swim-
ming Championships last week.

Boxing and wrestling also promise a good deal of support from students,
and tourneys are always large. Coach Nolemen, a well-known official in his own right,
handles both of these sports. The wrestling team, having completed its regular season
with a record of two wins against three losses, will enter the A.A.U. wrestling meet
the first of next month. Activities of the boxing squad this season [illegible]

This season's rifle squad piled up a record-breaking total of eighteen
victories to establish one of the finest records ever recorded by an Illinois Tech team.
A sixteen-man hockey squad was organized this winter but did not enter competition.

One of the most popular programs in the intramural schedule, which includes
such sports as basketball, bowling, ping-pong, golf, tennis, boxing, wrestling, track,
canoeing and baseball. Approximately 50 per cent of the men enrolled in day school
entered into this program during the past year. Regular schedules and tournaments are
held in each of these activities, providing an opportunity for all students to participate.

In addition, the physical education classes during the past year have taken
in 523 men, not including the regular compulsory navy classes which number about 52%
participants. Thus the present total enrollment in physical training and athletic
activities, excluding the navy contributing program, is at present 1161. This is well
below the normal, peace-time average of approximately 1500.

FOURTH ADD SPORTS

John Schommer, who has built the athletic structure at Illinois Tech up to its present status during the last 30 odd years, summarizes the situation at the Institute as follows.

"Athletics at Illinois Tech have always been fostered from two standpoints, one for the general welfare of the entire student body and, secondly, for those whose physique and ability are sufficiently good to develop for outside intercollegiate competition.

"Never in my time has an athlete been approached to enter Illinois Tech to be paid for his ability while attending college. His scholastic work always comes first and that, at any accredited engineering school, is a tough assignment."

-30-30-30-30-30-30-30-

John Doerner, who has built the athletic structure at Illinois Tech up to its present status during the last 30 odd years, summarizes the situation at the Institute as follows.

"Athletics at Illinois Tech have always been fostered from two standpoints, one for the general welfare of the entire student body and, secondly, for those whose physique and ability are sufficiently good to develop for outside intercollegiate competition.

"Never in my time has an athlete been encouraged to enter Illinois Tech to be paid for his ability while attending college. His scholastic work always comes first and that, at any accredited engineering school, is a tough assignment."

BASKETBALL LETTERS

CHICAGO, ILL. - Fifteen members of Illinois Tech's record-smashing 1944-45 quintet will be awarded major letters, according to an announcement made today by John J. Schommer, director of athletics.

This year's quintet set a new all-time record of 17 games won during a single season, capturing the last 13 in a row. Only five losses were debited to the season record, two of them to DePaul's brilliant squad, and the other three splits with the University of Chicago, Glenview and 87th Street Navy.

Letter winners included the following men: Capt. Tom Kilgariff, Chicago; Norman Hankins, Kokomo, Ind.; Ned Grable, Twelve Mile, Ind.; Henry Koci, Berwyn, Ill.; Robert Browning, Toledo, Ohio; Eugene Evers, Collinsville, Ill.; Charles Buckley, Chicago; Carl Leydig, Detroit; Byron Fanselow, Chicago; Dennis O'Geary, Waverly, Va.; Robert Kasnicka, Cicero, Ill.; Howard Poulter, LaGrange, Ill.; Sol Rosenthal, Akron, Ohio; Leonard Brown, Chicago, Mgr.; and Leonard Vogt, Cincinnati, Mgr.

ALUMNI

CHICAGO, ILL., March 14.--Tomorrow afternoon the first step in a program designed to awaken Chicagoans from their apathy in regard to civic affairs will be taken when a large number of college-trained men and women meet for a "Citizenship Luncheon".

Approximately 200 residents of Chicago and vicinity, representing the alumni associations of at least a dozen colleges and universities, will meet in the Georgian room of Carson, Pirie, Scott and Company at 12:15 p. m., to lay the basis for an Intercollegiate Alumni Council of Chicago, a permanent organization for joint action on matters of civic welfare.

Virgil Peterson, director of the Chicago Crime Commission, will be the principal speaker. The president of the National Foundation for Education in American Citizenship, Samuel R. Harrell of Indianapolis, will also discuss briefly the work of his organization.

The program, which will be in the hands of Chairman Frederick Faville, president of the Carnegie Tech alumni association of Chicago, is designed to show the college-trained persons in the community that civic affairs are vital to their well-being and that they should be vitally interested in their local, state, and national governments.

- m o r e -

FIRST ADD ALUMNI

The meeting was initiated by the alumni of the Illinois Institute of Technology and is being sponsored by the alumni of that institution, and of the University of Chica go, Northwestern university and Loyola university.

Among the college groups which will be present are the following: Beloit College, Carnegie Tech, Colgate University, Lawrence College, Loyola University, Illinois Tech, Northwestern University, University of Chicago, University of Indiana, University of Pennsylvania, University of Wisconsin and Marquette University.

NOTE TO DESKS: We have just heard that the presidents of three colleges in the Chicago area, Dr. Franklin B. Snyder, of Northwestern University, Rev. James Hussey, S.J., acting president of Loyola University, and Dr. Henry T. Heald, of Illinois Institute of Technology, will be present at the "Citizenship Luncheon" to be held at 12:15 tomorrow (Thursday, March 15) in the Georgian Room of Carson, Pirie, Scott and Co.

This meeting is being sponsored by the alumni of these three institutions, together with the University of Chicago, to set up an Intercollegiate Alumni Council of Chicago, a permanent organization for joint action on matters of civic welfare.

These three men, as well as the speaker, Virgil Peterson, director of the Chicago Crime Commission, will be available for pictures at this time.

OHMITE GIFT

CHICAGO, ILL. - Dr. Henry T. Heald, president of Illinois Institute of Technology, today announced an initial grant of $15,000 from the Ohmite Manufacturing company to be used for the establishment of a laboratory for the precision measurement of electrical and magnetic quantities.

The gift, came through David T. Siegel, president of Ohmite Manufacturing company and a trustee of Illinois Tech. It represents the initial contribution for equipping what will be known as the Ohmite Laboratory for Precision Measurements. It will be constantly expanded as new equipment becomes available.

The laboratory's ultimate goal is to provide precision electrical measurements for the Chicago area approaching in accuracy those of the Bureau of Standards in Washington, D. C.

Working through the Armour Research Foundation, industries in the vicinity will have an opportunity to use the laboratory's facilities. This will be the first such laboratory in the Chicago area to make its services available to industry. As such, the establishment of this laboratory is a definite contribution to the scientific and research facilities of the area.

In addition, the laboratory represents an important addition to Illinois Tech's electrical engineering equipment, by means of which graduate students can be trained in precision electrical measurements. It will further provide standards for research work carried on at the Foundation.

m o r e

The laboratory itself will be located at the Armour Research Foundation of Illinois Institute of Technology and will be developed under the direction of Prof. E. H. Schulz, supervisor of electrical engineering laboratories, and L. W. Matsch, supervisor of electrical engineering in the Armour Research Foundation. Also on the committee supervising the laboratory's construction are Dr. H. A. Leedy, Dr. W. A. Lewis, Dr. Thomas C. Poulter, Raymond E. Zenner and Dr. James S. Thompson.

Space has already been reserved for the laboratory in the engineering building of the Research Foundation and equipment will be placed in operation as soon as it can be obtained under present wartime conditions. It is hoped that the basic elements will be operating within six months, although some of the needed equipment cannot be obtained until after the war.

Mr. Siegel, in presenting the gift, stated the purpose of the laboratory as follows:

1. To provide facilities for studying the fundamental measurement of resistance, inductance, capacitance, current, voltage, power, power factor, permeability, etc., --basic quantities of electric and magnetic circuits and fields.
2. To provide calibration facilities for instruments and meters used in research and industry by affiliated organizations at Technology Center and by industries of the Chicago area.
3. To stimulate advanced training of the electrical engineering students at the Illinois Institute of Technology in the important field of precision measurements.

SECOND ADD OHMITE GIFT . 345-11

In further commenting on the value of the laboratory, Dr. Jesse E. Hobson, director of the Armour Research Foundation, said, "In all electrical work careful measurement of the quantities used is essential. The Bureau of Standards in Washington maintains the most accurate standards. For convenience, however, it is highly desirable to have throughout the country intermediate standards almost as accurate as those in Washington and more precise than the usual commercial measurements. Our function here is to provide one of those intermediate stations."

Power companies, manufacturers of various kinds of electrical equipment, and colleges are among the organizations which will immediately benefit from the project.

WESTINGHOUSE

CHICAGO, ILL., MARCH - Dr. Henry T. Heald, president of Illinois Institute of Technology announced today the establishment of a graduate fellowship in power system engineering at Illinois Tech by the Westinghouse Educational Foundation.

Carrying a grant of $3,000 to be applied over a three semester period the fellowship will be awarded for the first time next July. The recipient will be selected jointly by Illinois Tech and the Westinghouse Foundation.

Work of the fellow as outlined will consist of both graduate study and research with major emphasis being placed on work with Illinois Tech's new AC network calculator.

(The $80,000 network calculator built by the Westinghouse company and at present being installed at Illinois Institute of Technology, reproduces complete power systems in miniature for the study of load, distribution, etc. It is one of nine such boards in the United States; one of 11 such in the world.)

At the end of the three semesters the fellow will be eligible for candidacy for the degree of master of science in electrical engineering.

The fellowship was set up by the Westinghouse Educational Foundation under a plan developed by A. C. Monteith, representing the Foundation, and Dr. Jesse E. Hobson, former head of the electrical engineering department at Illinois Institute of Technology and now director of Illinois Tech's Armour Research Foundation.

EXCLUSIVE TO DALE HARRISON

The Australian plastics industry came to Illinois Tech this week in the persons of A. R. Penfold, representing the New South Wales government and Dr. J. W. Hogarth, professor of chemical engineering at the University of Sydney.

The two official representatives of the Australian government are making a tour of educational institutions in England and the U. S. to study instruction in plastics with the hope that they can build up a sizable post-war industry "down under."

I.I.T., which is at present the only institution in the country giving short but thoroughly integrated courses in plastics, may well prove to be the springboard for a peacetime training program of international scope.

Illinois Institute of Technology will present a series of three public lectures on the mechanism of polymerization and the mechanical properties of high polymers by Dr. H. Mark, director of the high polymer bureau at the Polytechnic Institute of Brooklyn, on March 22 and 23.

These lectures will be conducted in the auditorium of the Illinois Tech student union building, 3300 Federal Street. Evening lectures will be given both Thursday and Friday, March 22 and 23, from 8 p.m. to 9:40 p.m., and an afternoon lecture will be presented on Friday afternoon, March 23, from 1 p.m. to 2:40 p.m.

A special dinner is scheduled for Thursday evening at 6:30 to precede Dr. Mark's initial lecture.

CANTEEN

Hunters and fishermen of the post-war era will be spared at least one of their most perplexing problems--that of obtaining pure, clean, palatable drinking water while far afield from the nearest drinking fountain--due to a recent development by the Armour Research Foundation of Illinois Institute of Technology in collaboration with Hawley Products company of St. Charles, Illinois.

As every sportsman knows, the prospect of packing an adequate water supply in addition to other needed food and equipment is a dampener on any outing. And in this day and age it is more often than not actually dangerous to rely on local water supplies which may be dirty and contain harmful bacteris.

This latest development in the purification of such water both removes the dirt and bacteria and renders the water odorless and tasteless through the use of a novel canteen filter. The filter device, only .125 of an inch in thickness, may be removed and changed as necessary.

In operation, the canteen is filled with water, chlorinating pellets are dropped in to destroy the harmful bacteris, and the filter is replaced. In subsequently using the canteen, the water passes through the filter, which is composed of activated carbon surrounded by a layer of fibrous felt. The solid foreign matter is removed by the felt, while at the same time the activated carbon renders the water odorless and tasteless.

m o r e

A single filter pad of this type will purify approximately two and one-half gallons of water containing twenty parts per million of chlorine. A further improvement in the bleeder valve insures an unusually high and steady rate of flow.

This device has been developed primarily for the use of the armed forces which, especially in the case of advance units, are often forced to rely on drinking water from streams, lakes and questionable local water supplies.

With the use of one of these canteens, a palatable and sanitary supply of H_2O is guaranteed the individual, enabling him to quench his thirst without qualms or fear of after-effects.

Twenty-three letters have been awarded to athletes in two winter sports at Illinois Tech, it was announced today by Athletic Director John J. Schommer.

The swimming squad, which after recording a pair of victories over Lawrence College of Appleton, Wisconsin, while dropping meets to Illinois, Iowa and Northwestern, placed second in the Central Collegiate Swimming meet at East Lansing, Michigan, included the following letter-winners:

Majors: Don Helbling, Mgr., Chicago; Tom Lechner, Detroit; Whitney Pearson, Chicago; Joe Hardman, New York; J. H. Hunt, East Lansing, Mich.; Richard Axelrood, Chicago; Peter Dauzvardis, Chicago; and John Makielski, South Bend, Ind.

Minors: Bernard Brill, Chicagp; Wendell Omer, Salt Lake City, Utah; Arthur Alterman, Chicago; George Savardi, Erie, Pa.

The wrestling team finished with the same won and loss record, with the A.A.U. meet still on the calendar. Letters were awarded to the following:

Majors: Robert Buckius, Mgr., Maple Glen, Pa.; Donald Albert, Aurora; Roy Churan, Chicago; Donald Johnson, Davenport, Iowa; Robert Freund, Chicago; Victor Meiskowski, Chicago; Richard Lander, Detroit.

Minors: L. B. Mann, Detroit; Fred McCarthy, Muncie, Ind.; Arthur Marcusson, Chicago; Theodore Zaggy, Youngstown, Ohio.

WIRE RECORDER

Three new civilian licenses have been granted by the Armour Research Foundation of Illinois Institute of Technology to manufacture the Armour Magnetic Wire Sound Recorder and Reproducer.

Meisner Manufacturing Company of Mount Carmel, Illinois, (radios), Hammond Instrument Company of Chicago (organs) and Radiotechnic Laboratory of Evanston (wire recorders) have all been granted licenses. Radiotechnic Laboratory was previously licensed for manufacture in war work only.

While the entire output of recorders is today going exclusively to the armed forces, plans for post-war production for business and home use are now being laid.

The next conference of Armour licensees for civilian production will be held at the invitation of Stromburg-Carlson Company at Rochester, New York, on April 5.

CORROSION LABORATORY

A corrosion research laboratory, under the direction of Dr. Hugh McDonald has been established at Illinois Institute ofTechnology.

The shortage of materials and the difficulty of replacements have made it evident that the wastage of metals due to corrosion is an important economic and engineering problem. Dr. McDonald states, "Approximately two per cent of the total weight of iron and steel in the United States is wasted due to corrosion and must be replaced annually. The monetary loss throughout the world due to corrosion exceeds two billion dollars."

The purposesof the laboratory are to conduct a basic, long-range research program on the fundamental theory of the mechanism of corrosion processes and control, and to serve as a center for graduate instruction in the science and engineering of corrosion.

Until the founding of this laboratory at Illinois Institute of Technology, in the United States there was no combined educational and research center exclusively devoted to the many phases of corrosion. "The fundamental research that a center such as this carries on," says Dr. McDonald, "augments the work done in large manufacturing companies by scientists who study their specific corrosion problems."

The laboratory accepts sponsored research projects from industrial organizations which seek aid in the solution of their corrosion difficulties.

- m o r e -

FIRST ADD CORROSION LABORATORY

Results of the research will be published with full credit given to the sponsors in all publications.

Dr. McDonald points out that, "The approach to all problems is that of physical chemistry and physical metallurgy, from the stand point of fundamental research."

Looking to the future the director plans that the corrosion laboratory will become a center to which scientists from industry may be sent for training in the diagnosis and treatment of their corrosion problems.

Dr. McDonald predicts, "The problem will become even more important in the post-war period when many thousand tons of intricately built equipment will be stored in government warehouses for immediate call on notice of from 30 days to perhaps 20 years. The corrosion measures involved will be on an unprecedented scale."

TRACK

Norman Hankins of Kokomo, Indiana, and Bob Thurston of Deleware, Ohio, members of the navy V-12 unit at Illinois Institute of Technology, have been elected to co-captain of the 1945 Techawk track squad.

Hankins, the only returning major letter winner, led the scoring at the North Central Relays last Saturday. Holder of the unofficial school record for the hundred yard dash, Hankins competes in five events. Thurston, who was awarded a minor letter last season, is an experienced half-miler and miler.

This pair will lead their teammates into the AAU Indoor Championships at the University of Chicago next Saturday. The Techawks, who won the North Central Relays easily, will be the team to beat in this meet.

A.A.U. TRACK

Coach Roy McCauley today announced that his Illinois Tech track squad, favored to capture the team championship at the AAU Indoor Meet this Saturday, will not be at full strength due to Navy V-12 leaves which will take eight of his men.

The Techawk squad, which was not even severely tested in running over North Central 65 to 39, and capturing the North Central Invitational meet last week from 11 midwest colleges, is one of the best in recent years. Its balance is shown by the fact that it scored in every event in last Saturday's meet except the two-mile run.

Despite the blow to title-hopes, the Techawks will enter a full squad, led by Co-captain Norm Hankins, high scorer at the Relays, who will compete in five events.

DEAN LINTON E. GRINTER

Dr. Linton E. Grinter, dean of the graduate school and vice-president of Illinois Institute of Technology, came to the Institute in 1937.

A native of Kansas City, Missouri, where he was born on August 28, 1902, Dr. Grinter took his undergraduate work at the University of Kansas, graduating with a B.S. in civil engineering in 1923. Becoming interested in work on indeterminate structures, he continued his graduate work at the University of Illinois, earning an M.S. in structural engineering in 1924 and a Ph. D. in engineering in 1926.

In 1926 Dr. Grinter accepted a position with the Standard Oil Company of Indiana as a designing engineer, and in 1929 joined the faculty of Texas A. and M. college to teach structural engineering. In 1937 he became professor of civil engineering and head of the department at Armour Institute of Technology, and dean of the graduate division there.

With the merger of Armour Institute with Lewis Institute in 1940, Dean Grinter's responsibilities increased to the position of vice-president of Illinois Institute of Technology. He also serves as a consultant to the Bureau of Training of the War Manpower Commission, assisting in clarifying the position of engineers and engineering students in the war effort.

Over a period of years, Dr. Grinter has published a great many articles on the subject of indeterminate structures and five important and highly regarded books on structural analysis and design.

Dr. Grinter is a member of Sigma Xi, Tau Beta Pi, American Society

- m o r e -

of Civil Engineers, and the Society for the Promotion of Engineering Education. He is also a registered structural engineer in Illinois.

Dr. Grinter and family reside at 1321 East 56th Street, Chicago, Illinois.

DR. JESSE E. HOBSON

Dr. Jesse E. Hobson, head of the electrical engineering department of Illinois Institute of Technology from 1941 to 1944, was named director of the Armour Research Foundation in November, 1944.

Born at Marshall, Indiana, on May 2, 1911, Dr. Hobson graduated with honors from Purdue University in 1932 with the degree of bachelor of science in electrical engineering. He earned his master's degree at Purdue the next year, and received his doctorate, magna cum laude, from California Institute of Technology in 1935.

Dr. Hobson's first contact with Illinois Tech came in 1936 when he served as instructor in electrical engineering for one semester. From 1937 to 1941 he was a member of the engineering department of Westinghouse. In 1940, at the age of 29, he was voted the outstanding young engineer in the nation by Eta Kappa Nu, national honorary fraternity.

During his stay at Illinois Tech, Dr. Hobson has been a consulting engineer for the United States Government and other organizations. He has shown his executive ability in directing the large Army Signal Corps program at Illinois Tech, as well as the college graduate training programs in which industrial employees work toward advance college degrees in their own plants.

The Armour Research Foundation, headed by Dr. Hobson, is one of the largest research organizations in the country. Set up to render a research service to industry, it has grown from a staff of three scientists, working in three rooms, with an annual budget of $30,000, to a staff of 300 persons in five buildings with a yearly budget of over one and one-half million dollars. Two of its better known projects are the

- m o r e -

- 2 -

snow cruiser, developed for Admiral Byrd's antarctic expedition, and the magnetic wire recorder.

A member of three national honorary fraternities, Tau Beta Pi and Sigma Xi, engineering and scientific groups, and Eta Kappa Nu, Dr. and Mrs. Hobson and their young daughter reside at 5842 Stony Island Avenue, Chicago.

FRANK E. WHEELER, DIRECTOR OF IIT NEWS BUREAU

Frank E. Wheeler joined the staff of Illinois Institute of Technology in October, 1944, as director of the news bureau.

Born on March 24, 1913, in Platteville, Wisconsin, Mr. Wheeler is a journalism graduate from Marquette University. In 1937 he earned his bachelor of education degree from Platteville Teachers, later continuing graduate studies at the University of Wisconsin, the University of Missouri and the University of Illinois.

With a broad background in newspaper work--including experience in various editorial positions on the Milwaukee Journal, the Dubuque Telegraph Herald, the Fon du Lac Commonwealth Reporter, the Boonville Daily News and the Kansas City Star --- he has combined experience of an academic nature. He served as principal of a high school in Arena, Wisconsin, and for four years held a post as director of public relations and publicity at Kemper Military Academy.

Mr. Wheeler served as a second lieutenant in the army for four months before receiving a medical discharge.

"Antiprestidigitarianism" is his chief item of interest, (defined by the dictionary as artful deception.) Pulp fiction writing (sports and love) is another hobby, as well as short stories for magazines such as Liberty. His travels have taken him through the United States, Canada and Mexico.

Sigma Delta Chi, Sigma Chi, Pi Delta Epsilon, B.P.O.E., Masons (K.T. and O.E.S.) Kiwanis and the Junior Association of Commerce are among the organizations

- m o r e -

GOLF

A six-meet schedule has been carded by the Illinois Tech golf squad this season, Athletic Director John J. Schommer announced today.

Coached by Samuel Bibb, the entire varsity squad from last year has returned, augmented by several promising newcomers. Returning veterans include Bill Atchison, A/S Bob Negele, A/S Fred Fitchey, A/S Ken Milbradt, Wagner Larson and Leonard Baness, manager.

The schedule is as follows:

April 14, Northwestern, There

April 21, Bradley, Here

April 28, Bradley, There

May 12, Western Michigan, There

May 19, Lawrence, There

May 26, Western Michigan and Lawrence (triangular,) Here

BASEBALL

Coach Bernard "Sonny" Weissman will lead his 1945 Illinois Tech baseball squad against the University of Chicago nine this Saturday at Greenwood Field, in the opening game of the season.

Despite a small turnout, Weissman has a strong nucleas of experienced men held over from last season. A shortage of pitchers and outfielders present the major difficulties.

Last season the Techawks also opened the season against Chicago, battling 11 innings to a 7-7 tie.

TRACK

The Illinois Tech track squad, which placed second to Great Lakes at the AAU Indoor Championships on Saturday, will play host to Morton Junior College and Lawrence College in a triangular meet at the University of Chicago fieldhouse this Saturday. This encounter, which is scheduled for 1:30 p.m., will be the Techmen's first home meet.

The Techawks will again be at full strength for this meet, Coach Roy McCauley said today. Eight members of the squad, including Co-captain Bob Thurston, missed the AAU meet due to navy leaves.

Prior to Saturday's showing, the Techawks had run roughshod over all opposition, opening the season with a 65 to 39 victory over North Central Relays. In this meet, the Illinois Tech squad doubled the point total of the second place team.

A dual meet with Concordia at River Forest on April 28 will conclude the Techawk's indoor schedule.

WIRE RECORDER

In order to divest itself of commercial activities and devote itself to research and engineering development, for industry, the Armour Research Foundation of Illinois Institute of Technology has this week activated the Wire Recorder Development Corporation.

The primary function of the new corporation is to take over all commercial functions related to licensing companies to manufacture the wire recorder. A wholly-owned subsidiary of Illinois Tech's Armour Research Foundation, the corporation will also be in charge of providing special facilities for recording companies, assuring the wide distribution of recorded wire magazines as well as blank wire magazines, and generally expediting the entire program.

Lucius A. Crowell, former Chicago advertising agency man who has served as chairman of the industrial and educational uses of the recorder since April, 1944, is the president of this corporation. Other officers are: vice-president, Dr. Jesse E. Hobson, director of Illinois Tech's Armour Research Foundation; secretary and treasurer, Raymond J. Spaeth, treasurer of Illinois Institute of Technology; assistant secretary-treasurer, William M. Hammond, business manager of Illinois Tech's Armour Research Foundation.

Directors of the Wire Recorder Development Corporation are: Crowell, Hobson, R. J. Koch (president of Felt and Tarrant Manufacturing Company),

- m o r e -

FIRST ADD WIRE RECORDER

Thomas Drever (president of American Steel Foundries), and Dr. Henry T. Heald (president of Illinois Institute of Technology). Koch, Drever and Heald are also trustees of Illinois Tech.

Two new licensees have been announced by the corporation, Sonora Radio and Television Corporation and Webster Chicago Corporation, bringing to 17 the total number of companies already licensed. Nine of these companies are licensed to manufacture home radio recorder sets.

The business address of the Wire Recorder Development Corporation is 8 South Michigan Avenue, Chicago 3, Illinois.

FOUNDATION PROMOTIONS

The promotion of three members of the staff of the Armour Research Foundation of Illinois Institute of Technology has been announced by Dr. Jesse E. Hobson, director of the Foundation.

Lt. Comdr. Thomas C. Poulter, who has served on the staff of Illinois Tech's Armour Research Foundation since 1936, has been appointed associate director of science and engineering. Poulter, who holds a Ph. D. in chemistry from the University of Chicago, is most widely known for his services as chief scientist and second in command of the Byrd Antarctic Expedition II. Designer of the famous "Snow Cruiser" used on subsequent Antarctic expeditions, Lt. Comdr. Poulter received the Congressional Medal for " scientific accomplishment unequalled in Polar research."

Dr. Martin H. Heeren, chairman of chemistry and chemical engineering, has been named assistant director of research operations. A graduate of Carthage College, Dr. Heeren earned his doctorate at the University of Iowa in 1938. Prior to joining the staff of Illinois Tech's Armour Research Foundation, Dr. Heeren was analytical foreman of the University of Iowa fuel

- m o r e -

FIRST ADD FOUNDATION PROMOTIONS 454-8R

laboratory at Iowa City, dealing with research on coals and other fuels.

James V. Carlisle, who came to the Foundation on January 15 of this year, has been promoted to chairman of research services. A former mechanical engineering student at New York University, Mr. Carlisle spent twelve years in the field of design and production for the automotive and aircraft industry. He came to the Research Foundation at Illinois Tech from Ethyl Corporation where he was employed as plant engineer for eight years.

NETWORK CALCULATOR

Difficult problems in power system design and operation can now be analyzed economically and accurately at the Armour Research Foundation of Illinois Institute of Technology by means of a new $80,000 a-c network calculator purchased from Westinghouse Electric & Manufacturing company.

Facilities and skilled engineering service for such study and analysis are thus provided on a co-operative basis on a scale that might not seem a justifiable expenditure for any one company as an individual, says Dr. W. A. Lewis, consulting electrical engineer at the Foundation.

Participating companies interested in making sure of a definite time each year, have purchased time on a unit basis. One unit permits the use of the board for one week each year for a period of twelve years. The 17 Mid-west companies who thus far make up the sponsor group are:

Wisconsin Electric Power Co., Milwaukee

Wisconsin Power and Light Co., Madison

Wisconsin-Michigan Power Co., Appleton

Wisconsin Public Service Corp., Green Bay

Wisconsin Gas and Electric Co., Racine

- m o r e -

FIRST ADD NETWORK CALCULATOR 454-9R

Allis-Chalmers Mfg. Co., Milwaukee

Interstate Power Co., Dubuque

Iowa Electric Light and Power Co., Cedar Rapids

Iowa-Illinois Gas and Electric Co., Rock Island

Kansas Gas and Electric Co., Wichita

Ohio Public Service Co., Cleveland

Sargent and Lundy, Chicago

United Light and Power Service Corp., Davenport

Carnegie Illinois Steel Corp., Chicago

Inland Steel Corp., Chicago

Otter Tail Power Co., Fergus Falls

Illinois Institute of Technology, Chicago

Characteristics singular to any one power system can be reproduced in exactness but in miniature on the a-c network calculator. Hence, in determining solutions which would ordinarily be reached only through time-consuming mathematical manipulations, an electrical engineer can set up in miniature an interconnected power system representing major transmission lines extending for hundreds of miles and measure the distribution of power and voltages at different stations under various conditions.

Circuit elements are available to represent simultaneously 12 generating stations, 100 transmission lines or transformers, 40 loads and 18 variable ratio transformers. Engineers analyzing power system operation can, from the readings on the board, determine the effect of additional loads, methods by which additional loads may be carried, or the system changes that can be made. The miniature system reproduced on the board can be adjusted to simulate any operating condition on the power system itself. Since accurate

- m o r e -

SECOND ADD NETWORK CALCULATOR

measurements are possible at all points, the effect of changes in equipment or conditions can be forecast economically and correctly.

Dr. J. E. Hobson, Dr. W. A. Lewis, Mr. Lester B. Le Vesconte and Dr. L. T. Rader make up the membership of the laboratory staff who spearhead the project.

Dr. Hobson, director of Illinois Tech's Armour Research Foundation, fostered the idea of instituting the calculator at the Institute.

Dr. Lewis, formerly engaged in providing consulting service to electric power systems in New England and the Pacific Coast areas for Westinghouse, assumes the responsibility of adviser, and will be available for consultation and assistance in connection with calculator studies.

Supervisor of studies and chief engineer in charge of all operations is Mr. Le Vesconte. His services are considered of especial value since he has spent 18 years in the technical field dealing with power system problems for Westinghouse.

Dr. L. T. Rader, director of the department of electrical engineering, Illinois Institute of Technology, will be in charge of educational functions in connection with the board studies.

The establishment of rates for service, and matters relating to management and operation of the board will be left to a supervisory committee composed of Dr. Hobson, and one representative from each of the participating companies.

Several weeks of time in each year may be available on demand to companies not included in the sponsor group. Arrangements for

- m o r e -

THIRD ADD NETWORK CALCULATOR

scheduling such time will be handled through Mr. Le Vesconte.

Senior and graduate students of electrical engineering at Illinois Institute of Technology will aid Mr. Le Vesconte in the study of power system problems. Also assisting Mr. Le Vesconte will be the recipient of the Westinghouse Fellowship in Power Systems Engineering to be awarded by Illinois Tech and the Westinghouse Educational Foundation. The fellowship, open to graduates of recognized electrical engineering schools, provides as a part of its program training and experience with network calculator studies actually being made. The plan furnishes a most complete course in power system design and operation in a twelve months' period.

The award will be made for the first time next July, and carries a stipend of $1500 in addition to tuition for the three semesters. Upon satisfactory completion of the program, the fellow will be eligible for the degree of master of science in electrical engineering.

The calculator will also be useful in determining solutions for all problems which are closely enough associated mathematically, particularly in relation to analyzing mechanical stresses, such as those in airplane structures and in the columns and walls of buildings, the transmission of sound, and very high frequency radio waves, and the flow of heat.

SIGMA XI

A talk by Lester R.Ford, editor of the American Mathematical Monthly, on the subject "Guesswork and Approximation in Mathematics" will highlight the lecture program of the Illinois Institute of Technology chapter of Sigma Xi on Wednesday, April 11.

Professor Ford, who is chairman of the mathematics department at Illinois Tech, holds a Ph. D. degree from Harvard. His lecture, which will cover the gamut from square roots to differential equations, will be a resume of the mathematical methods of guessing and adjusting. According to Dr. Ford, "A good guess is very helpful, but a bad guess, in many cases, will lead inevitably to the correct answer."

This lecture, which will be given at 8:00 p.m. in the auditorium of the Illinois Tech student union building, will be open to the public. It will be preceded by a dinner in the East Dining Room of the student union at 6:30. Dr. V. I. Komarewsky, president of the local Sigma Xi chapter, will serve as master of ceremonies.

Sigma Xi is a national honorary scientific fraternity whose aim is the promotion of research. The Illinois Tech chapter was founded in 1941, with membership granted to those men who have shown themselves outstanding through their research work.

SPORTS

Norm Hankins, A/S, co-captain of the Illinois Tech track squad, never competed on the cinders during his four years at Kokomo, Indiana, high school. He set new Tech marks in the 100 and 220 last season, but the times were considered unofficial as only two of the three required watches clocked his performances. This season Coach McCauley is grooming Hankins for bigger things, as attested by his individual high-scoring performance at the North Central Relays.

IIT

Tennis enthusiasts at Illinois Tech are anxiously awaiting news from the Great Lakes Hospital where Jerry Evert, member of the Navy V-12 unit stationed at IIT, is recovering from acute tonsillitis. Jerry, younger brother of Jimmy, last season helped lead Notre Dame to a share of the National Intercollegiate Championship. The Techawks will open their spring schedule against Chicago on April 18.

IIT

Illinois Tech athletes this winter set new all-time victory marks in two sports. The basketball squad ran up 17 wins (the last 13 consecutively) to break last year's record of 16 triumphs in a single season. The rifle squad scored 15 wins, more than three times as many as ever before in Techawk history.

GOLF

The Illinois Tech golf squad will open its six-match schedule this Saturday as Coach Samuel Bibb leads his team against Northwestern University at Evanston.

The Techawks will have five veterans from last season included in their six man line-up. Fred Fitchey will probably play at the number one position. A member of the V-12 unit, he formerly played on the Notre Dame golf team. Wagner Larson, Bill Atchison, Ken Milbradt, and Robert Negele, as well as manager Leonard Baness, all represented Illinois Tech last spring. The lone newcomer is A/S Huntley Depew.

After the Northwestern match, the Techmen will play home and home matches with Bradley Tech, Western Michigan and Lawrence, winding up their season with a triangular meet at home with the latter two teams.

CANTEEN FILTER

Exclusive to Ben Markland

Today on battlefronts all over the world, an invention which is destined to take its place alongside the portable stove, pup tent and mess kit in the hearts and over the shoulders of sportsmen of the post-war era is getting its initiation under fire.

Developed by the Armour Research of Illinois Institute of Technology, in collaboration with Hawley Products of St. Charles, Illinois, this device is a tiny canteen filter, designed to provide pure, clean, palatable drinking water from any source at hand.

To every sportsman the problem of packing a sufficient supply of drinking water for an excursion is a perplexing one, while more often than not it is actually dangerous to rely on local water supplies. Chemical treatment of such water is apt to leave an unpalatable taste.

This latest research development by Illinois Tech is a filter only .125 of an inch in thickness, which may be removed and changed in the canteen as necessary. It both removes the dirt and bacteria and renders the water odorless and tasteless, providing a crystal clear drink with which to quench one's thirst.

In operation, the canteen is filled with water, clorinating pellets are dropped in to destroy the harmful bacteria, and the filter is replaced. In subsequently using the canteen, the water passes through the filter, which is composed of

CANTEEN FILTER

Exclusive to Ben Merkland

Today on battlefronts all over the world, an invention which is destined to take its place alongside the portable stove, pup tent and mess kit in the hearts and over the shoulders of sportsmen of the post-war era is getting its initiation under fire.

Developed by the famous Research of Illinois Institute of Technology, in collaboration with Hawley Products of St. Charles, Illinois, this device is a tiny canteen filter, designed to provide pure, clean, palatable drinking water from any source at hand.

To every sportsman the problem of packing a sufficient supply of drinking water for an excursion is a perplexing one, while more often than not it is actually dangerous to rely on local water supplies. Chemical treatment of such water is apt to leave an unpalatable taste.

This latest research development by Illinois Tech is a filter only .187 of an inch in thickness, which may be removed and cleaned in the canteen as necessary. It both removes the dirt and bacteria and renders the water odorless and tasteless, providing a crystal clear drink with which to quench one's thirst.

In operation, the canteen is filled with water, shortening pellets are dropped in to destroy the harmful bacteria, and the filter is replaced. In suspension using the canteen, the water passes through the filter, which is composed of

activated carbon surrounded by a layer of fibrous felt. The solid foreign matter is removed by the felt, while at the same time the activated carbon renders the water tasteless and odorless.

A single filter pad of this type will purify approximately two and one-half gallons of water containing twenty parts per million of chlorine. A bleeder valve assures an unusually high and steady rate of flow, enabling a full canteen to be emptied in approximately one minute.

Today this canteen serves the armed forces in solving the problem of obtaining satisfactory water supplies. Advance units, especially, must depend upon local water supplies such as wells, creeks, rivers and lakes for drinking water, creating a distinct health problem.

In the post-war era, a sportsman may set out, reassured by an infinitesimal object, .125 of an inch thick, that he may have all the pure, sparkling drinking water that he needs or desires.

CHICAGO, ILLINOIS - A/S Ned T. Grable, of Twelve Mile, Indiana, was a member of the Illinois Tech 880 yard relay team which last Saturday clipped a full two seconds off the Techawk school record as the four men covered the half-mile in 1:35.2. Richard Thomas of Bellevue, Ohio, John Hammack of Hollandale, Mississippi, and Norm Hankins of Kokomo, Indiana, all members of the Navy V-12 unit at Illinois Institute of Technology, were the other three men who composed the quartet of runners.

The new mark was established as the Techmen defeated Lawrence College and Morton Junior College in a triangular meet at the University of Chicago fieldhouse. Illinois Tech ran up 69½ points in winning, followed by Lawrence with 46½ and Morton with 14.

Thus far this season the Techawks have defeated North Central in a duel meet, won the North Central Relays from 11 other mid-west colleges, and placed second to Great Lakes in the AAU Indoor Championships, although scoring more than 100 points. A duel meet with Concordia Teachers College on April 28 will open the Techawk outdoor track season.

NORM HAWKINS

Special to the Kokomo Tribune

A/S Norman Hankins of R.R. 5, Kokomo, Saturday set a new Illinois Tech school record as he ran the 60 yard dash in 6.4 seconds during a triangular track meet with Lawrence College and Morton Junior College at the University of Chicago field house.

Norm, who is a member of the Navy V-12 unit stationed at Illinois Institute of Technology, has been elected co-captain of the 1945 Techawk track squad. He is the only major letterman to return from last season's squad.

In addition to his record breaking performance in the 60 yard dash, Hankins ran the anchor position on the half-mile relay team which also broke the old school mark with a 1:35.2 performance. He shared individual scoring honors with Clark of Lawrence.

So far this semester the Techmen have defeated North Central College, won the North Central Relays from eleven other mid-west colleges with Hankins leading the way as individual high-scorer, and placed second to Great Lakes in the AAU Indoor Championships, although scoring more than 100 points. The victory over Lawrence and Morton last Saturday concluded the indoor season, with a duel meet at Concordia Teachers College on April 28 scheduled to open the outdoor season.

-30-30-30-30-30-30-

Special to the Solano Tribune

A/A Forman Hawkins of A.A. U., Solano, Saturday set a new Illinois Conference school record as he ran the 60 yard dash in 6.4 seconds during a triangular track meet with Lawrence College and Morton Junior College at the University of Chicago Stadium.

Lowe, who is a member of the Navy V-12 unit stationed at Illinois Institute of Technology, has been elected co-captain of the 1945 Tech track squad. He is the only major letterman to return from last season's squad.

In addition to his record breaking performance in the 60 yard dash, Hawkins won the sprint position on the half-mile relay team which also broke the old school mark with a 1:35.2 performance. He showed individual sprinting powers with first by Lawrence.

So far this season the Techmen have defeated North Central College, won the Illinois Central Relays from eleven other mid-west colleges with Hawkins leading the way as individual high-scorer, and placed second to Great Lakes in the AAU Indoor Championships, although scoring more than 100 points. The victory over Lawrence and Morton last Saturday completed the indoor season, with a dual meet at Concordia Teachers College on April 28 scheduled to open the outdoor season.

BUILDING PROGRAM

A $13,200,000 program for Illinois Institute of Technology during the next decade was approved by the Institute's board of trustees meeting at the Chicago club yesterday.

President Henry T. Heald, in presenting the program to the board, pointed out that since 1941 industry and individuals have invested over $7,375,000 in the Institute in all ways including gifts to plant, equipment, and endowment and sponsorship of research.

The new program allocates the $13,200,000 as follows: $10,000,000 for buildings and campus; $3,200,000 for an educational operating fund.

The original campus program of Illinois Tech, conceived in 1941, has been expanded to include an area bounded by 31st street, Michigan avenue, 35th street, and the New York Central railroad.

Approximately $1,000,000 remains in the $3,000,000 building and campus fund which has been raised. One of the buildings planned three years ago is now completed, the Metals Research buildings of Illinois Tech's Armour Research Foundation. A second is partially complete and application for priority on the basis of new navy research has now been submitted for a further extension of this

-m o r e-

$500,000 structure. The remaining buildings are awaiting construction when steel priorities are relaxed.

Sixteen additional buildings ranging in cost from $300,000 to $750,000, exclusive of a new $1,200,000 dormitory extension, are provided for in the new plans. All buildings have been designed by Mies van der Rohe, head of the architectural department at Illinois Tech.

The board also approved the appointment of Raymond J. Spaeth, treasurer of the Institute since 1940, as executive secretary in charge of the development program.

BASEBALL

The Illinois Tech baseball squad, fresh from an 18 to 2 victory over the University of Chicago last Saturday, will meet the Northwestern nine at Evanston this Saturday.

Coach Bernard "Sonny" Weissman used fourteen players in the season opener against the Maroons, and they responded by pounding out 25 hits, while pitchers Evers and Kravolek limited Chicago to three safeties. The Techawks ran up 11 runs in the last three innings to sew up the game.

Return games with Chicago and Northwestern, as well as a pair of tilts with Concordia Teachers college, will complete the Tech schedule.

TRACK

Coach Roy B. McCauley of the Illinois Tech track squad today announced that a dual meet has been scheduled for April 21 at Notre Dame. The scheduling of this meet which will open the outdoor season, marks the entrance of Techawk track into big-time competition.

Although basketball, swimming, wrestling and rifle teams all competed against university and service opposition this winter, and baseball and golf schedules this spring include contests with competition of the same calibre, dual meets against Great Lakes and the Irish will serve as the cindermen's initial tests under heavy fire.

Probably never before in Techawk history have athletics risen to the heights that they have reached this year. Basketball and rifle teams both smashed previous victory marks during their 1944-45 campaigns, and the track team, victor in three meets so far this season, is well on its way to a record-breaking season.

High points of the track indoor season, which was concluded last week end, was a decisive victory over 11 other mid-west colleges in the North Central Relays, in which the Techawk point total was more than twice that of the second place team. A 65-39 victory over North Central in a dual meet, and last Saturday's triangular meet, in which two school records were broken as the Techmen scored 69½

-m o r e-

points to 46½ by Lawrence and 14 by Morton, were included in the streak. The Techawks also scored more than 100 points in placing second to Great Lakes at the AAU Indoor Championships.

TENNIS

The Illinois Tech tennis squad will open its spring season on Wednesday afternoon as the Techmen go into action against the University of Chicago netmen on the Midway.

Greatly weakened by the loss of Jerry Evert, former Senn High school and Notre Dame tennis star, who is confined with scarlet fever at the Great Lakes hospital, the Techawks are decided underdogs for this match. Leonard Vogt of Cincinnati is the only returning letterman from last season.

The spring tennis schedule is as follows:

April 18 --- University of Chicago, there

April 28 --- Beloit College, here

May 5 ------ University of Chicago, here

May 19 ----- Beloit College, there

May 26 ----- Lawrence College, there

June 9 ----- Lawrence College, here

WIRE RECORDER

In order to clarify the licensing policy with respect to the Magnetic Wire Sound Recorder developed by Illinois Tech's Armour Research Foundation, the following statement was issued today by Lucius A. Crowell, president of the Wire Recorder Development Corporation which is handling the wire recorder licensing program.

"It is our settled policy to license the manufacturer of the completed machine, whether it be a radio receiver-wire recorder combination or merely a wire recorder.

"The licensee, however, has the privilege of subcontracting the manufacture of any of the parts of the wire recorder which he does not wish to make himself, and he may have these made either by a licensee or by a non-licensee.

"However, if a licensee wishes to subcontract any component parts of the recorder, we believe he will naturally prefer to have these parts made by a concern licensed by us and thus have the benefit of its experience and engineering developments in wire recording plus the Foundation's continuing service research and development in the fundamentals of wire recording."

This statement was made in answer to many questions which have arisen of late respecting the corporation's licensing program.

Of the seventeen companies which have already been licensed

- m o r e -

FIRST ADD WIRE RECORDER

by the Wire Recorder Development Corporation, nine are licensed to make home radio receiver sets. Two new licensees, Sonora Radio and Television corporation and Webster Chicago corporation, have been announced.

The Wire Recorder Development Corporation, which was activated on April 1, has been designated by the Armour Research Foundation of Illinois Institute of Technology to take over all business and commercial activities related to licensing. The Foundation is a non-profit organization devoted to research and development work, and in order to divest itself of all commercial activities and devote itself exclusively to research, it has organized the corporation as a wholly owned subsidiary.

The Foundation is determined to protect its patent position and has already served notice of infringement on one manufacturer.

Other officers of the Wire Recorder Development Corporation, in addition to Crowell are: vice-president, Dr. Jesse E. Hobson, director of Illinois Tech's Armour Research Foundation; secretary and treasurer, Raymond J. Spaeth, treasurer of Illinois Institute of Technology; assistant secretary-treasurer, William M. Hammond, business manager of Illinois Tech's Armour Research Foundation.

Directors of the Wire Recorder Development Corporation are: Crowell, Hobson, R. J. Koch (president of Felt and Tarrant Manufacturing Company), Thomas Drever (president of American Steel Foundries), and Dr. Henry T. Heald (president of Illinois Institute of Technology). Koch, Drever and Heald are also trustees of Illinois Institute of Technology.

The specific purposes of the Wire Recorder Development Corporation are four-fold:

1. To handle licensing negotiations.
2. To provide special facilities for recording companies.
3. To assure the wide distribution of recorded wire

TRACK SQUAD

Illinois Tech's track squad, having completed one of the most successful indoor seasons in Techawk history, will open its outdoor schedule Saturday at Notre Dame.

The Techman will be in the role of David facing an Irish Golieth in their first meeting with the Notre Dame cinder squad. Although it is know that the Irish have a powerful and well-balanced squad this year, with a number of returning veterans supplemented by candidates from a large civilian enrollment, very little information has been released regarding the South Bend lads.

On the other hand, the Techmen are fresh from a fine showing on the indoor track, which was climaxed by an impressive triangular victory against Lawrence and Morton. The Techawks broke two school records, the 60 yard dash and the 880 yard relay, and came within a second of breaking records in the 440 and 880.

Illinois Tech won a dual meet with North Central by a 65-39 score, ran away from 11 other mid-west teams in the North Central Relays, and placed second to Great Lakes at the AAU Indoor Championships, though scoring more than a hundred points during their indoor campaign.

E. PHYSICS AND ELECTRICAL ENGINEERING BUILDING - Classrooms and laboratories, steel skeleton building 48' x 288'. 4 stories high. Main floor partly closed and partly open. Top three stories enclosed in glass except for ends which are enclosed in brick. Contains 57,600 sq.ft. and 691,200 cu.ft.

F. CHEMICAL AND CIVIL ENGINEERING BUILDING - Classrooms and laboratories, steel skeleton building 48' x 288'. 4 stories high. Main floor partly closed and partly open. Top three stories enclosed in glass except for ends which are enclosed in brick. Contains 57,600 sq.ft. and 691,200 cu.ft.

G. SHOPS BUILDING - Skeleton building 72' x 312', one story high (17½'). Enclosed in glass except for 7' of brick wall. Contains 22,464 sq.ft. and 393,120 cu.ft.

H. LIBRARY AND ADMINISTRATION BUILDING - Steel skeleton building 168' x 288', contains court. Partly one story and partly two story. Enclosed in glass except for 7' brick wall. Contains 96,768 sq.ft. and 1,161,216 cu.ft.

I. LOCKERS BUILDING - Skeleton building 72' x 168', one story high (12'). Enclosed in glass except for 7' brick wall. Contains 12,096 sq.ft. and 145,152 cu.ft.

J. GYMNASIUM AND NATATORIUM BUILDING - Skeleton building 96' x 240', one story high (32'). Enclosed in glass except for East wall which has 7' brick wall and the End Walls which are brick the full height. Contains 23,040 sq.ft. and 737,280 cu.ft.

m o r e

SECOND ADD BUILDING SPECIFICATIONS 454-11

K. FIELDHOUSE - Steel construction 144' x 216' x 60', one large hall, enclosed in glass except for 12' brick wall.

L. HUMANITIES BUILDING - Classrooms and a few laboratories. Steel skeleton 72' x 216'. 4 stories high. Main floor partly open and partly closed. Top three stories enclosed in glass except for ends which are enclosed in brick. Contains 65,664 sq.ft. and 787,968 cu.ft.

M. METALLURGY BUILDING - Classrooms, laboratories and foundry hall. Concrete skeleton Building with brick sills. 120' x 312'. Two stories high except for foundry hall. Contains court. 24' x 48'. Contains 74,880 sq.ft. and 898,560 cu.ft.

N. CHEMISTRY BUILDING - Classrooms and laboratories. Steel skeleton Building 72' x 192'. Three stories high. Main floor partly open and partly closed. Top two stories enclosed glass except for ends which are enclosed in brick. Contains 44,034 sq.ft. and 528,768 cu.ft.

O. ARCHITECTURE AND APPLIED ARTS BUILDING - Classrooms and laboratories. Steel skeleton building 72' x 192'. Three stories high. Main floor partly open and partly closed. Top two stories enclosed in glass except for ends which are enclosed in brick. Contains 44,034 sq.ft. and 528,768 cu.ft.

m o r e

P. MECHANICAL ENGINEERING BUILDING - Classrooms, laboratories and foundry hall. Concrete skeleton building with brick sills. 120' x 312'. Two stories high except for foundry hall. Contains court. 24' x 48'. Contains 74,880 sq.ft. and 898,560 culft.

Q. RESEARCH FOUNDATION BUILDING - Offices and laboratories. Steel skeleton 72' x 216'. 4 stories high. Main floor partly open and partly closed. Top three stories enclosed in glass except for ends which are enclosed in brick. Contains 65,664 sq.ft. and 787,968 cu.ft.

R. GAS INSTITUTE BUILDING - Offices and laboratories. Steel skeleton 72' x 216'. 4 stories high. Main floor partly open and partly closed. Top three stories enclosed in glass except for ends which are enclosed in brick. Contains 65,664 sq.ft. and 787,968 cu.ft.

OFFICE REPORT

Dr. V. I. Komarewsky was recently elected a member of the science committee of the Society of American-Soviet Friendship.

Recent publications of Dr. Komarewsky and Dr. C. H. Riesz:

Fischer-Tropsch Synthesis and the Gas Industry in "Petroleum Refiner", Nov. 1944.

Fischer-Tropsch Synthesis and the Petroleum Industry in "National Petroleum News", Feb. 7, 1945

Recent Publications of Dr. Komarewsky:

Production of Isoparaffins in "Industrial and Engineering Chemistry", vol. 37, p. 323, 1945, with Warson.

Catalytic Dehydration of Hexanal and Octanal in "Journal of American Chemical Society", vol. 67, p. 557, 1945 with Welick and Warson.

Recent publications of Herbert A. Simon:

State-Local Relations in City Planning in "State Government", April, 1945.

Postwar Planning for Organization and Management in "Public Management", April, 1945

Significance Tests and "yes-No" Choices in "Journal of the American Statistical Association, March, 1945.

Recent publication of Michael A. Sadowsky:

Mathematical Analysis in Psychology of Education in "Psychometrika", December, 1944.

FIRST ADD OFFICE REPORT 454-12

Professor H. P. Dutton talked to the Racine Manufacturers association, April 17. The subject of his talk was "Wage Incentives".

Professor Dutton was in Washington, D.C., April 7 and 8, attending an executive committee meeting of the Society for the Advancement of Management.

Dr. Henry T. Heald, president, will speak at the 40th anniversary celebration of the Milwaukee School of Engineering, Sunday, April 22, in Milwaukee.

Dr. Lester R. Ford delivered the Sigma Xi lecture, April 11. The subject of his talk was "Guess Work and Approximation of Mathematics".

Comdr. Elmer Shaw Pettyjohn, U.S.N.R. has been named director of the Institute of Gas Technology to secceed John I. Yellott. Since Comdr. Pettyjohn is on active duty with the navy, associate Director L. J. Willien will be in charge.

Lt. Comdr. Thomas C. Poulter, who has served on the staff of ARF since 1936, has been appointed associate director of science and engineering.

Dr. Martin H. Heeren, chairman of chemical engineering at ARF, has been named assistant director of research operations.

James V. Carlisle has been promoted to chairman of research services.

ILLINOIS INSTITUTE OF TECHNOLOGY NEWS BUREAU
FRANK E. WHEELER, DIRECTOR

Date: April 17, 1945 454-S

For Release: Thursday AM's

PETTYJOHN

Comdr. Elmer Shaw Pettyjohn, U.S.N.R., was today named director of the Institute of Gas Technology at Illinois Institute of Technology, succeeding John I. Yellott who has held the post since September 1, 1943.

Until the time when Comdr. Pettyjohn's naval assignment is terminated, Associate Director L. J. Willien will be in charge, according to the announcement by Dr. Henry T. Heald, president of Illinois Tech and the Institute of Gas Technology.

Comdr. Pettyjohn is at present absent from the country as head of the oil section of the United States Strategic Bombing Survey and as liaison in the United States Naval Technical Mission. Extensive experience as a consultant to numerous gas companies has fitted him for the directorship of the Gas Institute.

Born in Alma, Michigan, on April 12, 1897, Pettyjohn earned his B.A. at Michigan in 1918, obtaining his B.S.E. and M.S.E. there in 1922. In addition to several years of industrial and research experience, he was an associate professor of chemical engineering at the University of Michigan before joining the armed forces in 1940.

Comdr. Pettyjohn's primary research in the field of gas engineering has concerned the production of carbureted water gas, the use of bituminous,

-m o r e-

coking and non-coking coals and crude oil as water gas generator fuel, and evaporation and heat transfer.

Comdr. Pettyjohn's first service with the Navy overseas (1941) was an gunnery officer with a naval transport. He was later put in charge of an amphibious naval base in the South Pacific, after which he was assigned to head the section dealing with inspection and research on both solid and liquid fuels, in which capacity he has been in close touch with the work of the Bureau of Mines. Comdr. Pettyjohn holds the Navy Medal for gallantry.

Mr. Yellott will leave the Gas Institute on May 1 to become director of research with the Locomotive Development Committee of Baltimore, Md. A mechanical engineering graduate of Johns Hopkins University, Yellott served as director of the department of mechanical engineering at Illinois Tech for three years before taking the directorship of the Institute of Gas Technology. While at Illinois Tech he also directed the Engineering Science and Management War Training program.

In 1939 Yellott was named the "Outstanding Mechanical Engineer of the Past Decade" by Pi Tau Sigma. He was presented the Distinguished Service Award by the Chicago Junior Chamber of Commerce in 1942 and in that same year was named Outstanding Young Man of Illinois and received the Illinois Civic Service Award from the Illinois Junior Chamber of Commerce.

Leon J. Willien, who will take charge until Comdr. Pettyjohn assumes his directorship, was appointed associate director of the Institute of Gas Technology in July, 1944. Previously he had been affiliated with the Public Utility and Service Corporation, Chicago.

Willien attended Rose Polytechnic Institute, receiving his bachelor's degree in chemistry in 1906, his master's in chemistry in 1908 and his

-m o r e-

chemical engineering degree in 1910. Recipient of the American Gas Association's two top awards, the Beal medal in 1927 and the Charles A. Monroe Award in 1936, Willien has presented and published more than a score of technical papers.

The Institute of Gas Technology was founded at Illinois Institute of Technology in 1941 to provide a central research and educational service for the entire gas industry. Operating on an annual budget of more than $300,000, it now had underway a number of research projects for its various member companies as well as several long-range fundamental research programs for the general benefit of the entire gas industry.

MEKLER

L. A. Mekler, combustion engineer and member of the engineering and development department for Universal Oil Products Company since 1927, has been appointed engineering consultant to the Institute of Gas Technology and the Armour Research Foundation of Illinois Institute of Technology.

An inventor, author and lecturer on such subjects as combustion, furnaces, petroleum heaters and petroleum refining processes, Mr. Mekler is a naturalized Americal citizen of Russian extraction, who has lived in the United States for nearly twenty years.

Born in Churnigov, Russia, on July 1, 1894, Mr. Mekler earned his degree as Candidate of Commerce at Harbin, Manchuria, in 1912. He graduated from the University of Glasgow (Scotland) in 1915 with a B. Sc. and received a B. S. in metallurgy from the University of California in 1919.

He first became affiliated with Universal Oil Products in 1919 as a designor of heaters and process equipment. While an engineer in charge of the Chicago office, he designed the first commercial Dubbs Cracking Unit.

From 1921 to 1927 Mr. Mekler maintained his own consulting engineering offices in Chicago and in Newark, New Jersey, but in 1927 he again joined

- m o r e -

Dr. [illegible], membership organizer and member of the curriculum

MEKLER

L. A. Mekler, combustion engineer and member of the engineering and development department for Universal Oil Products Company since 1927, has assumed a new position as engineering consultant to the Institute of Gas Technology and the Armour Research Foundation of Illinois Institute of Technology.

An outstanding inventor, author and lecturer on such subjects as combustion, furnaces, petroleum heaters and petroleum refining processes, Mr. Mekler is a naturalized American citizen of Russian extraction, who has lived in the United States for nearly twenty years.

Born in Churnigov, Russia, on July 1, 1894, Mr. Mekler earned his degree as Candidate of Commerce at Harbin, Manchuria, in 1912. He graduated from the University of Glasgow (Scotland) in 1915 with a B. Sc. and received a B. S. in metallurgy from the University of California in 1919.

After two years with Trood-Darrah, consulting and management engineers, he first became affiliated with Universal Oil Products Company in 1919 as a designer of heaters and process equipment. While an engineer in charge of the Chicago office, he designed the first commercial Dubbs Cracking Unit.

From 1921 to 1927 Mr. Mekler maintained his own consulting engineering offices in Chicago and in Newark, New Jersey. As a consultant on

- m o r e -

FIRST ADD MEKLER

petroleum refining, chemical processes, heat application to industrial processes, etc., he served as a consultant on the final design and initial operation of the first commercial Jenkins Cracking Unit. Another of his more important projects was the development of design and placing in operation of the first commercial automatically controlled oil fried heat treating furnace.

In 1927 Mr. Mekler again joined the Universal Oil Product Company. His work was concerned with design development and placing in operation heaters for various petroleum refining processes, utilization of liquid and gaseous products and of petroleum coke as fuels, high temperature metals and refractories and the development of processes and equipment for thermal and catalytic refining of petroleum products.

On leave of absence from April 1942 to November 1943, Mr. Mekler served with the Petroleum Administration for War in Washington. As petroleum consultant to the foreign division, he was in charge of Russian requirements for petroleum refining equipment supplied to the U.S.S.R. under the 2nd Protocol of Lend Lease. He supervised the engineering problems for a number of new refineries for the production of motor gasoline, intermediate distillates and residual fuels, aviation gasoline, and aviation lubricating oils. He also trained Russian engineers in the technology of the processes and served as a liason between the Soviet Government Purchasing Commission, U. S. government agencies and American firms.

Mr. Mekler has approximately 70 issued American and foreign patents and some 20 pending applications related to his work. He has written about 30 articles for such scientific publications as Chemical and Metal Fuels and Furnaces, The Ceramist, Industrial Heating, Oil and Gas Journal, The Refiner, Journal A.I.M.E., Journal for American Ceramic Society, etc. Among them are "The Recirculating Furnace" which has been translated into 8 languages (including Japanese).

- m o r e -

SECOND ADD

"Petroleum Heaters" for the National Petroleum News, which has been translated or condonsod into 7 languages, and a chapter on "Heaters" in the Scionce of Petroleum.

Mr. Mekler has lectured on oil firing of ceramic materials at Rutgers University and conducted coursos on fuels and furnaces in the graduate school of Illinois Institute of Technology.

A member of A.S.M.E., A.I.M.E., A.S.T.M., and a past member of the American Ceramic Society, Mr. Mekler has been listed in "Who's Who in Engineering" since 1931. Married and the father of one son, Mr. Mekler resides at 5060 Marine Drive, Chicago.

SPORTS

The Illinois Tech track team, which has just completed one of the most successful indoor campaigns in Techawk history, is soberly preparing for its first major encounter against Notre Dame on April 21. Coach Roy McCauley subdued his charges last week by posting a list of the best Irish performances on the fieldhouse door.

----IIT----

Comiskey Park has been declared in-bounds for V-12 trainees stationed at Illinois Tech by Lt. Royal Sessions, commanding officer. Trainees having nothing better to do may attend baseball games during their free afternoons.

----IIT----

Coach Samuel Bibb, golf mentor at Illinois Tech, bought his first set of left-handed golf clubs back in 1920 for $10.00. Twenty years later he switched to playing golf right-handed and today swings effectively from either side.

----IIT----

Bill Cannon, playing-manager of the Illinois Tech tennis squad, is making a comeback after having both legs broken in an auto accident. Cannon composed half of the doubles team which formerly held the Utah state high school championship.

TENNIS

The Illinois Tech tennis squad will open its 1945 season against the University of Chicago Wednesday afternoon on the latter's varsity courts, 58th and University. The match is scheduled to begin at 4:30.

The loss of Jerry Evert, former Senn high school and Notre Dame star who has been sent to the Great Lakes hospital for treatment, has already crippled Techawk prospects. A/S Leonard Vogt, number three man from last season, is the lone returning letterman.

The Maroons last week scored impressive wins over North Central by a 6-0 score and Northwestern University, 8-1. Phil Glotzer, Harry Tully, and Dick Shapiro, all veterans from last season, will lead the Chicago squad.

Other matches on the Techawk schedule, which were announced this week by Coach Paul Hermann, include:

April 28----Beloit College there

May 5-------Chicago, here

May 12------Concordia Teachers College, here

May 19------Beloit, here

May 26------Lawrence College, there

June 2------George Williams College, there

June 9------Lawrence, here

June 16-----Concordia, there

GOLF

Illinois Tech's golf squad will play host to Bradley Tech of Peoria at 2 o'clock Saturday afternoon on the Westgate Valley Country Club links, 131st and Ridgeland.

The Techawks were 6½ to 5½ victims of the Bradley team last week-end. With the addition of Bill Atchison, a member of last year's squad, to an all-veteran team composed of A/S Fred Fitchey, A/S Ken Milbradt, A/S Wagner Larsen and A/S Bob Negele, the Techmen will present their strongest combination of the season.

This will be Tech's first home match. Dual meets at Western Michigan and Lawrence, followed by a triangular meet between the three teams, will complete the regular Techawk season.

TENNIS

Illinois Tech's tennis squad will meet the Beloit College netmen at Beloit Saturday afternoon, in the first encounter between these two schools since 1942.

Victims of the University of Chicago on the Maroon's home courts yesterday afternoon, (April 25), the Techawks will attempt to repeat the shut-out they scored against the Beloit squad on their last meeting three years ago.

Weakened by illness and ineligibility losses, the Techmen will be paced by Mike Vogt, a member of the Navy V-12 unit from Cincinnati, who held down the number three position last season. Bill Cannon, of Salt Lake City, Dave Afton of Chicago, and Jona Cohn of Chicago, will round out the Tech line-up.

The Beloit squad holds a 5-1 decision over North Central College in their opening match of the season. A return match is scheduled for May 19 at Chicago.

BASEBALL

Coach Bernard "Sonny" Weissman's Illinois Tech baseball squad will meet the University of Chicago this Saturday in a return game scheduled for 2:30 on Greenleaf Field.

The Techawks will present the same line-up which scored an impressive 18-2 victory over the Maroons on their first meeting. Pitcher Gene Evers, who held Chicago to three hits while his mates were pounding out 25 safeties will again handle the mound chores.

The Tech squad boasts a .394 team batting average in its first two games against Chicago and Concordia Teachers College, although the latter edged them out last Saturday, 8-7, by scoring six unearned runs in the first three innings. Concordia and Chicago hitters combined to average a meagre .105, with 11 hits in 71 turns at bat, from the offerings of Evers and Edward Kravolec.

TRACK

Coach Roy B. McCauley's Illinois Tech track squad, which made a surprisingly strong showing although going down to a 73-48 defeat at the hands of Notre Dame last Saturday, will meet Concordia Teachers College in a dual meet at River Forest Saturday afternoon.

Having completed perhaps the greatest indoor season in Tech history, the Techawks will be gunning for new records in several events. During their last indoor meet of the season, against Lawrence and Morton Junior College, Co-captain Norm Hankins, broke the former 60 yard dash record, the 880 yard relay team clipped two seconds off the old mark, and A/S John Hammack and A/S Bob Thurston each missed previous records in the 440 and 880 respectively by less than a second.

Last Saturday against the Irish, Illinois Tech smashed the 880 relay outdoor record in winning that event in 1:33.7. Coach McCauley expects his squad to write several other new marks into the books before the current campaign is ended.

Illinois Tech, which ran up 56½ points in winning the North Central Relays last month while Concordia scored 10 points to tie for fifth place, will be preparing for their next major encounter, a dual meet with Marquette University on May 12.

BASEBALL

A/S Gene Evers and A/S Ray Murphy, members of the Illinois Tech base-bass squad, have been elected co-captains for the 1945 season.

Evers, the Techawks' ranking pitcher, is from Collinsville, Illinois. One of Coach "Sonny " Weissman's three returning major lettermen, Evers has limited opposing batters to a .105 mark in games against Chicago and Concordia so far this season.

Murphy, who is playing his first season in the outfield for the Techmen, hails from Hamilton, Ohio. He won a major letter while attending Purdue last season.

The new co-captains will lead the Techawks against the University of Chicago this Saturday in a return game. Illinois Tech defeated the Maroons in the opening game of the season, 18-2.

SPORTS

Seven members of Illinois Tech's 1944-45 basketball squad, which ran up a total of 17 victories to break the former Tech record this winter, are represented on various varsity squads this spring. Norm Hankins and Ned Grable are track men, Gene Evers, Dennis O'Geary and Byron Fanselow play on the baseball team, and Mike Vogt and Howard Poulter are on the tennis squad. Hankins and Evers co-captain their respective sports, while Vogt holds down the number one position on the net squad.

IIT

Although civilian men make up a majority of Illinois Tech's 900-odd daytime students, approximately 90% of the men competing on baseball, track, tennis and golf squads this season are members of the Navy V-12 unit stationed on the Tech campus.

IIT

Included in Illinois Tech's new post-war building program which has just been announced are plans for a $650,000 fieldhouse and a $450,000 gymnasium and natatorium. Athletic Director John J. Schommer, former University of Chicago athletic great, has been largely responsible for this development.

IIT

Dick Thomas, Ned Grable, John Hammack and Norm Hankins, members of the Illinois Tech 880 yard relay team which broke the Techawk's indoor mark two

ESMWT

CHICAGO, ILL. - Dr. Henty T. Heald, president of Illinois Institute of Technology and adviser for Region 14, Engineering Science and Management War Training, announced today that all ESMWT courses in this region would terminate on June 30. Region 14 comprises the states of Illinois, Indiana, and Wisconsin.

The ESMWT program which was started in January of 1941 on a national basis is estimated to have trained nearly 2 million men and women in the engineering, science and management fields for the war production program. One of the largest single programs in the nation was that of Illinois Institute of Technology where nearly 60,000 persons have been graduated from the courses.

Other institutions in the Chicago area which have offered the work during the life of the program include: Northwestern university, Wheaton college, Lake Forest college, Central YMCA college, DePaul university, Loyola university and the University of Chicago.

The order comes at a time when Illinois Tech was just starting registration for the new ESMWT term to begin May 21. This registration has been cancelled but the Institute is hopeful that the majority of the work can still be carried on in the regular evening sessions, registration for which will be on June 28 and 29.

ENROLLMENT

According to figures recently released by President Henry T. Heald, 2,182 students are enrolled at Illinois Institute of Technology during the current semester.

Of this total, 1,591 attend classes in the eight major departments on the south campus, located at 33rd and Federal streets. The remaining 591 students are registered at Illinois Tech's west campus, 1951 West Madison street.

A naval V-12 unit of 431 men makes up a considerable part of the regular daytime enrollment of 928 on the south campus. In addition, there are 663 men and women taking evening classes.

Mechanical engineering is the largest single department with 378 day students. Electrical engineering with 224 and chemical engineering with 141 are next in line, followed by civil engineering, science, architecture, industrial engineering, and fire prevention engineering in that order.

On the west campus, 161 students are enrolled in day classes with 430 registered as evening students. All those attending on the west campus are civilian students, largely from the Chicago area.
